SUPPLY UTILIZATION ACCOUNTS OF SELECTED AGRICULTURE AND FISHERY COMMODITIES

FOREWORD

This annual publication on Supply Utilization Accounts (SUA) of Selected Agriculture and Fishery Commodities is the 36th edition released by the Philippine Statistics Authority (PSA). It covers the reference period 2020 to 2022. A total of 82 agriculture and fishery commodities are included and classified into ten (10) major groups, i.e., Cereals, Rootcrops, Vegetables and Legumes, Nuts, Fruits, Commercial Crops, Livestock, Poultry, Non-Food Crops, and Fish and Fishery Products.

Each commodity contains a brief description of the SUA to guide data users in understanding the physical accounting of the selected agricultural commodities. The SUA tables also allow users to compute other food security indicators such as self-sufficiency and import dependency ratios.

The PSA welcomes comments and suggestions from the data users for further improvement of this publication.

TECHNICAL NOTES

Concepts/Definitions

Supply Utilization Accounts is a comprehensive statistical framework for the physical accounting of agricultural commodities produced in the country.

A. Supply Elements

Supply - is the quantity of food supplies available before disposal to food and non-food uses. It comprises of Beginning Stocks, Production, and Imports.

Beginning Stock - refers to the quantity of the commodity available at the beginning of the reference period. This includes stocks held at various levels from the farm to final consumption or consumers of the commodity usually at the household level. It also includes that part of imports held in stocks.

Production - relates to the total domestic production that takes place during the reference period.

Crop Production – this refers to the quantity produced and harvested for a particular crop during the reference period. It includes those measured but damaged, stolen, given away, consumed, given as harvesters' share, and reserved. Also included are those production from “pakyaw” and “contract growers”. On the other hand, excluded are those produced but not harvested for whatever reason/s.

Livestock and Poultry Production - refers to the volume of indigenous (locally-raised) animals disposed for slaughter plus animals exported or shipped-out for slaughter both in liveweight equivalent.

Volume of Fisheries Production

- a. Commercial Fisheries – quantity of fish catch unloaded in the commercial fish landing centers;
- b. Marine Municipal Fisheries – quantity of fish catch unloaded in the municipal fish landing centers;
- c. Inland Municipal Fisheries – quantity of species caught by inland fishing households; and
- d. Aquaculture – quantity of species harvested in the aquafarms.

Imports - refer to all goods entering any of the seaports or airports in the Philippines, which are properly cleared through the Customs or remaining under the Customs control, whether the goods are for direct consumption, for merchandising (global manufacturing, global trade in commodities), for warehousing or for further processing.

SUPPLY UTILIZATION ACCOUNTS OF SELECTED AGRICULTURE AND FISHERY COMMODITIES

General imports are flows of goods entering the statistical territory of a country applying the general trade system and recorded in compliance with the general and specific guidelines on scope. (Source: IMTS 2010 Concepts and Definitions, page 27, B. General Trade System)

B. Utilization Elements

Utilization - comprises of seeds, feeds and waste, processing, exports, and the balance, which represents the Net Food Disposable.

Seeds – is the amount of the commodity allotted for seeds or, in general, for production purposes.

Feeds – refer to the amount of the commodity allotted for food for livestock, poultry, and fisheries during the reference period.

Wastage – is the amount of the commodity loss during the reference period at various stages from farm to retail level as in processing, storage, and transport.

Processing – is the volume of the commodity used as inputs or raw material for manufacturing food and non-food items.

Exports - refer to all goods leaving the country which are properly cleared through the Customs.

General exports are flows of goods leaving the statistical territory of a country, applying the general trade system, and recorded in compliance with the general and specific guidelines on scope. (Source: IMTS 2010 Concepts and Definitions, page 27, B. General Trade System)

Net Food Disposable - refers to the volume of food commodity available for human consumption. Net food disposable (NFD) is the remaining balance after all the "use" parameters are taken into account. The NFD in per capita per year and per capita per day are expressed in kilograms and grams, respectively.

Ending Stock - the stock of the commodity available at the end of the reference period. This includes stock held at various levels, i.e., households, traders, government, and commercial warehouses.

Carcass - the body of any slaughtered animal after the removal of the offals.

Offals - the by-product and other edible parts such as head, tail, organ glands, and other tissue meat of the animals.

**SUPPLY UTILIZATION ACCOUNTS
OF SELECTED AGRICULTURE AND FISHERY COMMODITIES**

Estimation Procedures

1. The average levels presented in the statistical tables are derived by dividing the sum of the three-year data by three (3). The average growth rates are derived by dividing the sum of growth rates by two (2).
2. The unit of measurement is metric ton except for palay and corn which is in thousand metric tons.
3. The derived per capita NFD per year is expressed in kilograms, while per capita NFD per day is expressed in grams.
4. Exports and imports data are taken from the Trade Statistics Division of the Philippines Statistics Authority (PSA).
5. The estimation of per capita NFD for 2020 to 2022 is based on mid-year population projection from the 2015 Census of Population and Housing (CPH).
6. The blank spaces in the tables indicate that there are no data available.
7. Some commodity descriptions:
 - a. Coffee – production and trade data are expressed in green bean equivalent.
 - b. Sugarcane – includes all production in cane for centrifugal, chewing, panocha/muscovado, “basi”/vinegar, and ethanol.
 - c. Abaca – production is in dried raw fiber expressed in metric tons.
 - d. Cotton – in cotton seed form.
 - e. Rubber – production is converted to natural rubber equivalent, while trade data are already expressed in natural rubber.
 - f. Tobacco – in dry leaf.
 - g. Tuna – includes skipjack, yellowfin, frigate, big-eye, and eastern little tuna. Tuna-like species are not included.

SUPPLY UTILIZATION ACCOUNTS OF SELECTED AGRICULTURE AND FISHERY COMMODITIES

a. FOOD COMMODITY

1. Estimation of Gross Supply (GS)

$$GS = \text{Beginning Stock} + \text{Production} + \text{Imports}$$

2. Estimation of Net Supply Disposable (NSD)

$$NSD = \text{Gross Supply} - (\text{Exports} + \text{Ending Inventory})$$

3. Estimation of Net Food Disposable (NFD)

$$NFD = NSD - (F + S + W + FU + NFU)$$

Where: NSD	= net supply disposable
F	= quantity used for feeds
S	= quantity used for seeds
W	= quantity lost/spoiled (waste)
FU	= quantity processed for food use
NFU	= quantity processed for non-food use

4. Estimation of Per Capita Net Food Disposable (NFD)

$$\begin{aligned} \text{NFD (kg/yr)} &= \frac{\text{Total NFD}}{\text{Population}} \\ \text{NFD (grams/day)} &= \frac{\text{NFD (kg/yr)}}{365 \text{ (days)}} \times 1000 \end{aligned}$$

b. NON-FOOD COMMODITY

1. Estimation of Total Supply

$$TS = \text{Production} + \text{Imports}$$

2. Estimation of Domestic Use (DU)

$$DU = \text{Total Supply} - (\text{Exports} + \text{Seeds} + \text{Wastes})$$

OF SELECTED AGRICULTURE AND FISHERY COMMODITIES**

Conversion Ratios and Parameters

Conversion Ratios for Rice, Coffee, Livestock and Poultry, and Rubber

Item	Equivalent/Conversion
RICE	Quantity of Palay X 0.654
CATTLE	
Dress weight	Production (in mt) X 0.50
Offals	Production (in mt) X 0.0861
CARABAO	
Dress weight	Production (in mt) X 0.50
Offals	Production (in mt) X 0.0861
HOG	
Dress weight	Production (in mt) X 0.70
Offals	Production (in mt) X 0.1433
GOAT	
Dress weight	Production (in mt) X 0.44
Offals	Production (in mt) X 0.1433
CHICKEN	
Dress weight	Production (in mt) X 0.77
DUCK	
Dress weight	Production (in mt) X 0.75
COFFEE	
Coffee Dried Berries/Cherries to Green Coffee Beans	Production (in mt) X 0.50
	Adoption of conversion rate of coffee dried berries to green coffee bean from 28% to 50% as per PSA Board Resolution No. 05 Series of 2022
RUBBER	Production (in mt) X 0.50
	Adoption of conversion rate of cup lump to dry rubber from 25% to 50% as per PSA Board Resolution No. 09 Series of 2021

The local rice production exhibited a fluctuating trend from 2020 to 2022. From an estimated production of 12.62 million metric tons in 2020, it increased to 13.05 million metric tons in 2021 and settled at 12.92 million metric tons in 2022. On average, production of rice was recorded at 12.86 million metric tons, which reflects a 1.2 percent annual increment during the three-year period.

Importation of rice continued to increase from 2.22 million metric tons in 2020 to 3.86 million metric tons in 2022. Rice imports averaged 3.02 million metric tons during the period. On the other hand, the volume of exports was recorded at less than one thousand metric tons throughout the reference years.

The total volume of rice available for consumption averaged 14.57 million metric tons from 2020 to 2022 or equivalent to 132.19 kilograms on a per capita basis. From 125.26 kilograms in 2020, per capita NFD increased to 135.09 kilograms in 2021, and further expanded to 136.23 kilograms in 2022.

In 2022, the country's corn production was recorded at 8.26 million metric tons, a decline from the 8.29 million metric tons in 2021, but higher than the recorded production of 8.12 million metric tons in 2020. The annual average production from 2020 to 2022 was estimated at 8.22 million metric tons, which reflects a 0.8 percent annual increase during the reference period.

The volume of corn imports in 2022 was recorded at 926 thousand metric tons, which grew annually by 101.4 percent and was the highest recorded volume of corn imports during the period. On the other hand, the lowest volume of corn imports was reported in 2021 at 460 thousand metric tons, which declined by -40.2 percent from the 768.53 thousand metric tons in 2020. Corn imports averaged 718 thousand metric tons during the reference years. Meanwhile, the exportation of corn was reported at two thousand metric tons in 2020, one thousand metric tons in 2021, and three thousand metric tons in 2022.

In 2022, the total volume of corn for consumption was 2.76 million metric tons, which expanded by 5.7 percent from 2.61 million metric tons in 2021. The total volume of corn for consumption was reported at 2.37 million metric tons in 2020. During the reference period, the total NFD for corn was computed at an average of 2.58 million metric tons. On per capita terms, it was estimated at 21.81 kilograms in 2020, 23.68 kilograms in 2021, and 24.72 kilograms in 2022.

In 2022, the volume of production for cassava was 2.56 million metric tons, which reflects an average annual decline of -0.9 percent from 2.61 million metric tons in 2020. Cassava production averaged 2.58 million metric tons during the three-year period.

There were no recorded imports of cassava during the period. Meanwhile, the average volume of exported cassava from 2020 to 2022 was reported at 1.72 thousand metric tons. The volume of cassava exports expanded from 1.32 thousand metric tons in 2020 to 1.98 thousand metric tons in 2021. In 2022, it declined to 1.87 thousand metric tons.

An average of 257.31 thousand metric tons of cassava was available for human consumption during the reference years. The highest NFD was noted in 2020 at 260.56 thousand metric tons, while it was lowest in 2021 at 255.66 thousand metric tons. Annual per capita NFD was highest in 2020 at 2.40 kilograms, while the lowest was in 2022 at 2.29 kilograms. On average, the annual per capita NFD was estimated at 2.34 kilograms.

During the reference period, the production of gabi showed an uptrend with an average year-on-year growth of 2.6 percent. The volume of gabi production in 2022 at 113.13 thousand metric tons increased by 2.3 percent from 110.55 thousand metric tons volume of gabi production in 2021. In addition, the gabi production in 2020 was recorded at 107.42 thousand metric tons. The average gabi production was 110.37 thousand metric tons.

The volume of imported gabi continued to increase from 44 metric tons in 2020 to 115 metric tons in 2022, reflecting an annual average growth of 61.7 percent. Meanwhile, an average of two metric tons of exported gabi was reported during the three-year period.

The average quantity of gabi available for food consumption was 104.55 thousand metric tons. During the reference period, the recorded NFD was highest in 2022 at 107.21 thousand metric tons and was lowest in 2020 at 101.72 thousand metric tons. The average per capita NFD was computed at 0.95 kilogram per year.

The domestic production of pao galiang recorded an average annual increment of 1.3 percent during the reference years. Pao galiang production increased from the reported 8.60 thousand metric tons in 2020 to 8.85 thousand metric tons in 2021. However, the volume of pao galiang production declined annually in 2022 at 8.82 thousand metric tons. The average annual production of pao galiang was posted 8.76 thousand metric tons.

There were no registered foreign transactions for pao galiang from 2020 to 2022.

During the three-year period, the total NFD for pao galiang averaged 7.18 thousand metric tons per year. From 7.05 thousand metric tons in 2020, it expanded to 7.26 thousand metric tons in 2021. The total net food disposable settled at 7.24 thousand metric tons in 2022. In per capita terms, the volume of pao galiang available for consumption was derived at an annual average of 0.07 kilogram.

For the period 2020 to 2022, the country's production of potato contracted by an annual average of -2.5 percent. It exhibited a downtrend from 113.56 thousand metric tons in 2020 to 103.06 thousand metric tons in 2021. In 2022, production improved to 107.42 thousand metric tons. The annual average production of potato was posted at 108.01 thousand metric tons during the reference years.

In 2022, the total volume of potato imports was 28.72 thousand metric tons, which grew by 11.4 percent from 25.79 thousand metric tons in 2021. The average volume of potato imports was noted at 27.05 thousand metric tons. Meanwhile, less than one metric ton of potato was exported in 2020 and one metric ton in 2021. There was no recorded exportation of potato in 2022.

On the average, the quantity of potato available for consumption was registered at 102.49 thousand metric tons. It was estimated at 105.95 thousand metric tons in 2020, 97.77 thousand metric tons in 2021, and 103.75 thousand metric tons in 2022. The per capita NFD averaged 0.93 kilogram per year.

From 2020 to 2022, the production of sweet potato grew by a yearly average of 1.0 percent. In 2020, the sweet potato production was recorded at 546.89 thousand metric tons and decreased to 545.52 thousand metric tons in 2021. In 2022, production reached 558.32 thousand metric tons. On the average, sweet potato production was estimated at 550.24 thousand metric tons.

The volume of sweet potato imports was reported at 24 metric tons in 2020 and 78 metric tons in 2022. Meanwhile the exports of sweet potato was biggest at 623 metric tons in 2020. However, it registered continuous reduction from 29 metric tons in 2021 to 25 metric tons in 2022.

The total NFD averaged 520.87 thousand metric tons during the three-year period. From 517.27 thousand metric tons in 2020, it decreased to 516.55 thousand metric tons in 2021 and went up to 528.80 thousand metric tons in 2022. The per capita NFD for sweet potato was highest in 2020 at 4.76 kilograms while the lowest was in 2021 at 4.69 kilograms. In 2022, per capita NFD was estimated at 4.74 kilograms.

Production of tugue showed a downward trend with an average annual contraction of -2.0 percent over the reference years. From 2.39 thousand metric tons in 2020, it decreased to 2.32 thousand metric tons in 2021, and further reduced to 2.29 thousand metric tons in 2022. Annual average of tugue production was posted at 2.33 thousand metric tons.

There were no reported importation and exportation of tugue during the reference period.

The average volume of tugue available for consumption was estimated at 2.01 thousand metric tons from 2020 to 2022. From 2.06 thousand metric tons in 2020, it went down to 1.97 thousand metric tons in 2022. The per capita net food disposable remained at 0.02 kilogram throughout the reference period.

Over the period 2020 to 2022, the local production of ubi declined by an average of -1.5 percent. It was 13.96 thousand metric tons in 2020 and increased to 14.15 thousand metric tons in 2021. In 2022, production was down at 13.54 thousand metric tons. The annual average production of ubi was recorded at 13.88 thousand metric tons.

Ubi imports were reported at an average of 182 metric tons. It was 297 metric tons in 2020 and 249 metric tons in 2021. Imports was down to less than one metric ton in 2022. On the other hand, exports of ubi averaged 762 metric tons. It was noted at 689 metric tons in 2020 and peaked at 1.14 thousand metric tons in 2021. In 2022, it went down to 460 metric tons.

The quantity of ubi available for consumption averaged 12.69 thousand metric tons during the reference period. From 12.95 thousand metric tons in 2020, it continuously dropped to 12.48 thousand metric tons in 2022. On a per capita basis, the annual average net food disposable was recorded at 0.12 kilogram.

The domestic production of ampalaya increased at an average rate of 0.5 percent during the reference years. The ampalaya production increased from the recorded 87.80 thousand metric tons in 2020 to 88.22 thousand metric tons in 2021. Production of ampalaya further improved to 88.68 thousand metric tons in 2022. The average annual production of ampalaya was posted at 88.23 thousand metric tons.

There were no reported imports of ampalaya from 2020 to 2022. Meanwhile, exports were registered at one metric ton in 2021 and three metric tons in 2022.

During the reference years, the total amount of ampalaya available for food consumption was computed at an average of 81.15 thousand metric tons. In 2022, the total volume of ampalaya for consumption was 81.56 thousand metric tons, which increased by 0.5 percent from 81.13 thousand metric tons in 2021 and 80.76 thousand metric tons in 2020. On per capita basis, NFD for ampalaya was estimated at 0.74 kilogram each in 2020 and 2021, and 0.73 kilogram in 2022.

For the period 2020 to 2022, the production of asparagus exhibited a downward trend in local production with an average reduction of -23.8 percent. The volume of asparagus production in 2022 at 609 metric tons declined by -29.8 percent from 867 metric tons in 2021. In addition, the asparagus production in 2020 was registered at 1.06 thousand metric tons in 2020. The country's average production of asparagus from 2020 to 2022 was 844 metric tons.

Importation of asparagus was recorded at one metric ton throughout the reference period. Meanwhile, exports were noted only in 2021 at less than one metric ton.

The total NFD for asparagus averaged 778 metric tons during the reference years. The estimated NFD continued to decline from 973 metric tons in 2020 to 561 metric tons in 2022. In per capita terms, the net food disposable was constant at 0.01 kilogram per year from 2020 to 2022.

During the three-year period, the production of bell pepper grew annually by an average of 7.7 percent. The volume of bell pepper production ranged from 14.93 thousand metric tons in 2020 to 17.33 thousand metric tons in 2022. The average bell pepper production was 16.07 thousand metric tons.

From 2020 to 2022, there were no recorded foreign trade transactions for bell pepper.

The computed total NFD for bell pepper averaged 15.27 thousand metric tons per year. From 14.18 thousand metric tons in 2020, it rose to 15.16 thousand metric tons in 2021. In 2022, total NFD reached 16.46 thousand metric tons or equivalent to 0.15 kilogram per capita. The annual per capita NFD averaged 0.14 kilogram during the reference years.

Over the reference years, the domestic production of black pepper showed a fluctuating trend and recorded an average decline of -1.0 percent. From 1.03 thousand metric tons in 2020, it was down to 965 metric tons in 2021. The black pepper production improved to 1.01 thousand metric tons in 2022. The annual average production of black pepper was 999 metric tons.

The country's importation of black pepper averaged 6.95 thousand metric tons from 2020 to 2022. Imports were registered at 6.48 thousand metric tons in 2020 and 7.28 thousand metric tons in 2021. In 2022, imports of black pepper settled at 7.11 thousand metric tons. Meanwhile, black pepper exports were 22 metric tons in 2020, 125 metric tons in 2021, and 46 metric tons in 2022.

The quantity of black pepper available for food consumption was derived at an average of 7.49 thousand metric tons. The highest NFD was registered in 2021 at 7.71 thousand metric tons, while it was lowest in 2020 at 7.11 thousand metric tons. The estimated annual per capita NFD remained at 0.07 kilogram from 2020 to 2022.

In 2022, the volume of broccoli production at 3.86 thousand metric tons reflects an average annual increment of 7.6 percent from 3.34 thousand metric tons in 2020. On the average, broccoli production was 3.57 thousand metric tons.

The volume of broccoli imports was recorded at an average of 109 metric tons during the three-year period. It increased from 124 metric tons in 2020 to 202 metric tons in 2021. The lowest volume of broccoli imports was noted in 2022 at less than one metric ton. Meanwhile, the reported volume of exported broccoli was registered only in 2020 at less than one metric ton.

During the reference period, the total NDF averaged 3.39 thousand metric tons. An increasing trend was observed from 3.19 thousand metric tons in 2020 to 3.56 thousand metric tons in 2022. The annual per capita NFD was constant at 0.03 kilogram from 2020 to 2022.

Cabbage production posted a downtrend with an average decline of -3.3 percent during the three-year period. The volume of cabbage production in 2022 at 121.25 thousand metric tons declined by -2.6 percent from 124.49 thousand metric tons in 2021. In addition, the cabbage production in 2020 was reported at 129.80 thousand metric tons. The average production of cabbage was 125.18 thousand metric tons.

Imports of cabbage was registered only in 2021 at 63 metric tons. There was no record of cabbage exportation from 2020 to 2022.

The total NFD for cabbage was estimated at an average of 115.16 thousand metric tons per year. During the three-year period, the derived NFD was decreasing from 119.39 thousand metric tons in 2020 to 111.52 thousand metric tons in 2022. In per capita terms, NFD was computed at 1.10 kilograms in 2020, 1.04 kilograms in 2021, and 1.00 kilogram in 2022. The average per capita NFD was 1.05 kilograms per year over the reference period.

The country's carrot production registered a fluctuating trend from 2020 to 2022 with an average decline of -4.3 percent. Carrot production increased from 63.53 thousand metric tons in 2020 to 64.04 thousand metric tons in 2021. The level of carrot production contracted and settled at 57.98 thousand metric tons in 2022. The three-year production average was noted at 61.85 thousand metric tons.

Imports of carrot were less than one metric ton each in 2020 and 2021. Meanwhile, there were no reported exports of carrot during the reference years.

The total quantity of carrot available for food consumption averaged 56.90 thousand metric tons. It was highest in 2021 at 58.91 thousand metric tons and was lowest in 2022 at 53.34 thousand metric tons. The annual per capita NFD for carrot ranged from 0.48 kilogram in 2022 to 0.54 kilogram in 2020.

Production of cauliflower in the country recorded an average annual contraction of -7.9 percent. The volume of cauliflower production continued to decrease from 11.98 thousand metric tons in 2020 to 10.14 thousand metric tons in 2022. The average cauliflower production was estimated at 11.19 thousand metric tons over the reference years.

The volume of imported cauliflower fluctuated from nine metric tons in 2020 to 16 metric tons in 2021. Imports settled at 12 metric tons in 2022. Meanwhile, exports of cauliflower was posted only in 2020 at less than one metric ton.

The total volume of cauliflower available for food consumption figured at an average of 10.30 thousand metric tons per year. In 2020, it was recorded at 11.03 thousand metric tons and decreased to 10.54 thousand metric tons in 2021. In 2022, the NFD was computed at 9.34 thousand metric tons or equivalent to 0.08 kilogram per person. The average per capita NFD throughout the period was computed at 0.09 kilogram per year.

The annual production of celery registered an average increment of 3.4 percent from 2020 to 2022. Celery production went up from the registered 3.63 thousand metric tons in 2020 to 3.88 thousand metric tons in 2022. The average annual production of celery was estimated at 3.79 thousand metric tons.

During the reference years, imports of celery were recorded at an average of 26 metric tons. The volume of celery imports dropped from 56 metric tons in 2020 to less than one metric ton in 2022. There were no exports of celery throughout the reference period.

The volume of celery available for food consumption averaged 3.51 thousand metric tons over the reference period. The highest was reported in 2021 at 3.58 thousand metric tons, while it was lowest in 2020 at 3.39 thousand metric tons. The per capita NFD was even at 0.03 kilogram throughout the period.

The annual domestic production of eggplant registered an average growth of 1.1 percent during the three-year period. In 2020, eggplant production was noted at 242.73 thousand metric tons and expanded to 244.04 thousand metric tons in 2021. Continuous improvement in production was observed in 2022 at 248.15 thousand metric tons. On the average, eggplant production was 244.97 thousand metric tons.

There were no recorded imports of eggplant during the reference years. Meanwhile, exports ranged from less than one metric ton in 2020 to four metric tons in 2022.

The total NFD was computed at an average of 225.33 thousand metric tons which corresponded to an annual increase of 1.1 percent. The derived NFD was highest in 2022 at 228.25 thousand metric tons and was lowest in 2020 at 223.27 thousand metric tons. The annual per capita NFD for eggplant averaged 2.05 kilograms over the reference period.

The volume of garlic production in 2022 was 5.89 thousand metric tons, which reflects an average annual contraction of -6.5 percent from 6.77 thousand metric tons in 2020. Garlic production averaged 6.18 thousand metric tons per year.

The country's importation of garlic registered an annual average of 94.65 thousand metric tons from 2020 to 2022. The volume of imports grew from 88.51 thousand metric tons in 2020 to 93.39 thousand metric tons in 2021. The highest level was posted in 2022 at 102.06 thousand metric tons. On the other hand, the volume of exported garlic was reported at six metric tons in 2020, 29 metric tons in 2021, and less than one metric ton in 2022.

The average quantity of garlic available for food consumption was 92.02 thousand metric tons during the reference years. The highest NFD was reported in 2022 at 98.60 thousand metric tons, while it was lowest in 2020 at 86.84 thousand metric tons. In per capita basis, the NFD was estimated at 0.80 kilogram in 2020 to 0.88 kilogram in 2022.

An uptrend in the domestic production of ginger was noted at an average of 3.0 percent annual increment from 2020 to 2022. It was 27.13 thousand metric tons in 2020 and was up to 28.15 thousand metric tons in 2021. Production further increased to 28.77 thousand metric tons in 2022. An average of 28.01 thousand metric tons of ginger was produced during the period.

Importation of ginger averaged 9.43 thousand metric tons during the three-year period. From 12.24 thousand metric tons in 2020, it declined to 10.39 thousand metric tons in 2021. In 2022, imports dropped to 5.67 thousand metric tons. Ginger exports were recorded at less than one metric ton and one metric ton in 2021 and 2022, respectively.

The volume of ginger available for food consumption averaged 34.31 thousand metric tons. It was highest in 2020 at 36.08 thousand metric tons and lowest in 2022 at 31.54 thousand metric tons. The per capita NFD was estimated at 0.33 kilogram in 2020, 0.32 kilogram in 2021, and 0.28 kilogram in 2022. The average per capita NFD was 0.31 kilogram per year.

For the period 2020 to 2022, the annual production of gourd recorded an average growth of 1.2 percent. Production was 73.08 thousand metric tons in 2020 and was reduced to 72.86 thousand metric tons in 2021. In 2022, production recovered and settled at 74.81 thousand metric tons. Average gourd production was estimated at 73.58 thousand metric tons per year.

There were no foreign trade transactions during the reference period.

During the three-year period, the average NFD was estimated at 67.67 thousand metric tons. From 67.21 thousand metric tons in 2020, it decreased to 67.01 thousand metric tons in 2021 and went up to 68.81 thousand metric tons in 2022. In per capita terms, NFD averaged 0.61 kilogram over the reference years.

Mango production decreased at an average of -0.2 percent during the reference years. The highest production was noted at 37.04 thousand metric tons in 2020 while the lowest was recorded at 35.48 thousand metric tons in 2021. In 2022, the level of production increased to 36.85 thousand metric tons. The average mango production during the three-year period was estimated at 36.46 thousand metric tons.

Imports of mango exhibited an uptrend from 41.00 thousand metric tons in 2020 to 51.20 thousand metric tons in 2022. On the average, imports of mango were computed at 47.16 thousand metric tons. In contrast, the volume of mango exports decreased from 97 metric tons in 2020 to 24 metric tons in 2022. It averaged 47 metric tons over the reference period.

Over the period 2020 to 2022, the total NFD for mango was estimated at an average of 82.96 thousand metric tons. It posted an upward trend from 77.36 thousand metric tons in 2020 to 87.40 thousand metric tons in 2022. Annual per capita NFD averaged 0.75 kilogram throughout the reference years.

For the period 2020 to 2022, the domestic production of okra grew at an annual rate of 0.2 percent. The highest production at 32.75 thousand metric tons was registered in 2022. Production was lowest in 2021 at 32.42 thousand metric tons, sliding from 32.63 thousand metric tons in 2020. On the average, okra production was 32.60 thousand metric tons during the three-year reference period.

There were no recorded imports of okra from 2020 to 2022. Meanwhile, the volume of okra exports averaged 3.82 thousand metric tons. It declined from 5.05 thousand metric tons in 2020 to 3.73 thousand metric tons in 2021, and 2.67 thousand metric tons in 2022.

The total quantity of okra available for food consumption was computed at an average of 26.47 thousand metric tons during the reference years. From 25.36 thousand metric tons in 2020, the NFD increased to 26.39 thousand metric tons in 2021 and further went up to 27.66 thousand metric tons in 2022. The derived per capita NFD ranged from 0.23 kilogram in 2020 to 0.25 kilogram in 2022.

The domestic production of onion from 2020 to 2022 fluctuated with an average annual increment of 2.8 percent. From 229.54 thousand metric tons in 2020, onion production was reduced to 218.05 thousand metric tons in 2021. In 2022, production recovered at 241.03 thousand metric tons. The average production of onion was estimated at 229.54 thousand metric tons.

Imports of onion was highest at 101.68 thousand metric tons in 2021 and lowest at 26.11 thousand metric tons in 2022. Imports averaged 71.77 thousand metric tons during the three-year period. Meanwhile, onion exports were recorded at 163 metric tons in 2020, 81 metric tons in 2021, and 282 metric tons in 2022. It averaged 176 metric tons during the reference years.

Total NFD averaged 274.38 thousand metric tons from 2020 to 2022. The highest was recorded at 291.39 thousand metric tons in 2021 and the lowest was noted at 242.90 thousand metric tons in 2022. The computed per capita NFD for onion was lowest in 2022 at 2.18 kilograms while the highest was in 2020 at 2.66 kilograms.

The volume of domestically produced peanut grew by an average rate of 3.6 percent during the reference period. From 29.39 thousand metric tons in 2020, it increased to 30.57 thousand metric tons in 2021. Production reached 31.52 thousand metric tons in 2022. On the average, peanut production was estimated at 30.49 thousand metric tons per year.

Imports of peanut exhibited an uptrend from 2020 to 2022. Imports expanded from 68.41 thousand metric tons in 2020 to 97.23 thousand metric tons in 2022. It averaged 80.77 thousand metric tons over the reference years. Meanwhile, exports of peanut were reported at four metric tons in 2020, one metric ton in 2021, and less than one metric ton in 2022.

The quantity of peanut available for food consumption was computed at an average of 102.82 thousand metric tons during the three-year period. From 90.36 thousand metric tons, it continued to expand and reached 118.99 thousand metric tons. The estimated per capita NFD ranged from 0.83 kilogram in 2020 to 1.07 kilograms in 2022.

Soybean production grew by an average of 13.6 percent from 2020 to 2022. From 554 metric tons in 2020, it went down to 407 metric tons in 2021. Production of soybean improved to 626 metric tons in 2022. An annual average of 529 metric tons of soybean was produced during the reference years.

The highest volume of soybean imports was recorded at 167.10 thousand metric tons in 2022 while the lowest was at 152.49 thousand metric tons in 2020. Imports averaged 161.71 thousand metric tons. On the other hand, soybean exports were recorded at one metric ton in 2020, less than one metric ton in 2021, and two metric tons in 2022.

Total net food disposable for soybean averaged 42.99 thousand metric tons. It increased continuously from 40.55 thousand metric tons in 2020 to 44.44 thousand metric tons in 2022. In per capita terms, net food disposable was recorded at 0.37 kilogram in 2020, and 0.40 kilogram each in 2021 and 2022.

During the reference years, the domestic production of squash exhibited an uptrend with an average increment of 0.4 percent. Production grew from 193.81 thousand metric tons in 2020 to 195.34 thousand metric tons in 2022. On the average, squash production was 194.75 thousand metric tons.

There was no record of squash imports from 2020 to 2022. Exports were registered at six metric tons and 19 metric tons in 2021 and 2022, respectively.

The volume of squash available for food consumption during the three-year period averaged 179.15 thousand metric tons. The NFD increased from 178.30 thousand metric tons in 2020 to 179.68 thousand metric tons in 2022. Annual per capita NFD averaged 1.63 kilograms per year.

The country's production of cashew nut registered an annual average reduction of -25.8 percent from 2020 to 2022. About 25.59 thousand metric tons were produced both in 2020 and 2021. In 2022, production went down to 12.38 thousand metric tons. The average production of cashew nut was recorded at 21.19 thousand metric tons during the three-year period.

Importation of cashew nut was one metric ton in 2020 and less than one metric ton each in 2021 and 2022. On the other hand, exports of cashew nut decreased from 350 metric tons in 2020 to 203 metric tons in 2021. There were no reported exports in 2022.

The total NFD for cashew nut was estimated at an average of 20.73 thousand metric tons. The highest NFD was noted at 25.08 thousand metric tons in 2021 and lowest at 12.19 thousand metric tons in 2022. In per capita terms, it was estimated at 0.23 kilogram each in 2020 and 2021. In 2022, it was computed at 0.11 kilogram. The average per capita NFD was derived at 0.19 kilogram per year.

For the three-year period, pili nut production in the country contracted annually by an average of -4.8 percent. Production declined from 6.33 thousand metric tons in 2020 to 5.74 thousand metric tons in 2022. The annual average production of pili nut was 5.98 thousand metric tons.

There were no reported imports of pili nut from 2020 to 2022. On the other hand, exports were registered at 55 metric tons in 2020, 23 metric tons in 2021, and three metric tons in 2022. The average annual pili nut exports was recorded at 27 metric tons.

The average total NFD for pili nut was 5.90 thousand metric tons during the reference years. In 2020, it was 6.22 thousand metric tons and decreased to 5.78 thousand metric tons in 2021. It continued to drop at 5.68 thousand metric tons in 2022. On a per capita basis, NFD from 2020 to 2022 averaged 0.05 kilogram.

For the period 2020 to 2022, the country's production of banana contracted by an average of -0.2 percent annually. In 2020, production was registered at 9.06 million metric tons and was up to 9.09 million metric tons in 2021. Banana production declined to 9.01 million metric tons in 2022. The annual average production of banana was 9.05 million metric tons.

The quantity of imported banana was recorded at 22 metric tons in 2020 and dropped to less than one metric ton in 2021. There were no reported imports of banana in 2022. Banana exports exhibited downward trend from 3.81 million metric tons in 2020 to 2.28 million metric tons in 2022. Exports of banana averaged 2.85 million metric tons during the three-year period.

The total NFD for banana was estimated at an annual average of 4.28 million metric tons during the reference years. From 3.62 million metric tons in 2020, it rose to 4.56 million metric tons in 2021 and further increased to 4.65 million metric tons in 2022. The computed per capita NFD ranged from 33.29 kilograms in 2020 to 41.67 kilograms in 2022. It averaged 38.79 kilograms during the reference period.

The domestic production of durian declined by an average of -2.9 percent during the period. The highest volume of production was noted at 78.82 thousand metric tons in 2020, while the lowest was recorded at 73.87 thousand metric tons in 2021. On the average, durian production was estimated at 75.61 thousand metric tons.

There was no record of durian imports over the three-year period. Meanwhile, exports of durian posted an annual average of 438 metric tons from 2020 to 2022.

Total NFD for durian averaged 70.67 thousand metric tons over the reference years. It registered an average decline of -2.5 percent, from 73.37 thousand metric tons in 2020 to 69.62 thousand metric tons in 2022. The derived per capita NFD averaged 0.64 kilogram per year during the three-year period.

Guyabano production increased at an average of 0.4 percent during the three-year period. The volume of production of guyabano was 7.51 thousand metric tons in 2020 and increased to 7.66 thousand metric tons in 2021. Production decreased and settled at 7.58 thousand metric tons in 2022. Annual production of guyabano averaged 7.58 thousand metric tons over the reference years.

From 2020 to 2022, there was no reported imports of guyabano. Meanwhile, less than one metric ton of guyabano was exported only in 2021.

Over the period 2020 to 2022, the total NFD for guyabano averaged 7.13 thousand metric tons. It was highest in 2021 at 7.20 thousand metric tons and lowest in 2020 at 7.06 thousand metric tons. In 2022, the total NFD was posted at 7.12 thousand metric tons or equivalent to 0.06 kilogram in per capita terms.

For the period 2020 to 2022, the jackfruit production reported decreasing trend by an annual average of -1.9 percent. From 40.20 thousand metric tons in 2020, it declined to 39.39 thousand metric tons in 2021. In 2022, production continued to decrease to 38.69 thousand metric tons. The annual average production of jackfruit was posted at 39.43 thousand metric tons during the reference years.

Imports of jackfruit were registered at 24 metric tons each in 2020 and 2021. There was no reported importation of jackfruit in 2022. Meanwhile, exports recorded an uptrend, from 54 metric tons in 2020 to 174 metric tons in 2022. Jackfruit was exported at an average of 128 metric tons during the reference years.

The estimated average NFD for jackfruit was at 36.96 thousand metric tons during the three-year period. It was highest at 37.76 thousand metric tons in 2020 and lowest at 36.20 thousand metric tons in 2022. The per capita NFD was derived between 0.32 kilogram in 2022 to 0.35 kilogram in 2020.

The domestic production of lanzones was 7.91 thousand metric tons in 2022, equivalent to an average reduction of -28.7 percent from the 16.04 thousand metric tons in 2020. An average of 11.14 thousand metric tons of lanzones was produced during the reference years.

There were no reported lanzones imports from 2020 to 2022. Exports were registered at seven metric tons in 2020, one metric ton in 2021 and nine metric tons in 2022. Exports of lanzones averaged six metric tons over the reference period.

On the average, the total volume of lanzones for food consumption was computed at 10.47 thousand metric tons. In 2020, the total NFD was registered at 15.07 thousand metric tons and was reduced in 2021 at 8.91 thousand metric tons. In 2022, it settled at 7.43 thousand metric tons. The per capita NFD ranged from 0.07 kilogram in 2022 to 0.14 kilogram in 2020.

The volume of mandarin production contracted by an average of -6.1 percent from 2020 to 2022. It was estimated at 10.97 thousand metric tons in 2020 and was down to 10.67 thousand metric tons in 2021. The level of production continued to decline to 9.66 thousand metric tons in 2022. The three-year average production of mandarin was noted at 10.43 thousand metric tons.

Imports of mandarin fluctuated over the reference years and registered an average of 132.87 thousand metric tons. From 134.32 thousand metric tons in 2020, it expanded to 155.88 thousand metric tons in 2021. However, it dropped to 108.42 thousand metric tons in 2022. Meanwhile, the reported volume of exported mandarin was less than one metric ton throughout the reference years.

The average quantity of mandarin available for food consumption was 134.71 thousand metric tons during the three-year period. It was recorded highest at 156.55 thousand metric tons in 2021 and was lowest in 2022 at 110.99 thousand metric tons. In per capita terms, NFD averaged 1.22 kilograms annually from 2020 to 2022.

In 2022, the volume of mango production was 712.55 thousand metric tons, which indicates an average of -1.8 percent contraction from the 739.25 thousand metric tons in 2020. On the average, the country produced 731.17 thousand metric tons of mango from 2020 to 2022.

Mango imports were registered only in 2021 at 30 metric tons. On the other hand, exports of mango during the three-year period fluctuated. From 10.66 thousand metric tons in 2020, it decreased to 10.10 thousand metric tons in 2021 and went up to 10.72 thousand metric tons in 2022.

The volume of mango available for food consumption averaged 677.44 thousand metric tons per year. In 2020, it was estimated at 684.88 thousand metric tons and increased to 687.73 thousand metric tons in 2021. It was down to 659.73 thousand metric tons in 2022 or 5.91 kilograms in per capita terms. The average per capita NFD during the reference period was derived at 6.15 kilograms per year.

The country's production of mangosteen showed a downward trend with an average annual reduction of -35.3 percent during the three-year period. From the highest level of production at 4.02 thousand metric tons in 2020, it dropped to 1.83 thousand metric tons in 2021 and continuously declined to 1.54 thousand metric tons in 2022. Mangosteen production averaged 2.46 thousand metric tons per year.

No importation of mangosteen was recorded from 2020 to 2022. Meanwhile, exports were recorded at three metric tons in 2020, 26 metric tons in 2021, and six metric tons in 2022. Exports averaged 12 metric tons during the period.

The total NFD for mangosteen averaged 2.31 thousand metric tons which corresponded to a -35.1 percent contraction over the reference years. It was highest in 2020 at 3.78 thousand metric tons and was lowest in 2022 at 1.44 thousand metric tons. Per capita NFD was 0.03 kilogram in 2020, 0.02 kilogram in 2021, and 0.01 kilogram in 2022.

The volume of pineapple production showed an uptrend with an average of 3.9 percent from 2020 to 2022. The highest production was registered at 2.91 million metric tons in 2022 while the lowest was at 2.70 million metric tons in 2020.

There were no imports of pineapple during the reference period. Meanwhile, exports showed a fluctuating trend from a high of 594.73 thousand metric tons in 2020, it dropped to 551.56 thousand metric tons in 2021. Pineapple exports reached 582.54 thousand metric tons in 2022. It averaged 576.27 thousand metric tons.

The total volume of pineapple available for consumption averaged 1.12 million metric tons from 2020 to 2022. It was recorded at 1.05 million metric tons in 2020 and rose to 1.15 million metric tons in 2021. In 2022, it reached 1.17 million metric tons. In per capita terms, NFD averaged 10.20 kilograms per year during the period.

In 2022, production of pomelo at 27.80 thousand metric tons grew by 3.2 percent from 26.93 thousand metric tons in 2021. In addition, production of pomelo was posted at 26.87 thousand metric tons in 2020. On the average, production of pomelo reported an annual increment of 1.7 percent or 27.20 thousand metric tons from 2020 to 2022.

There was no record of pomelo importation during the period. On the other hand, exported pomelo were reported at three metric tons in 2020, five metric tons in 2021, and two metric tons in 2022.

The total quantity of pomelo available for food consumption was estimated at an average of 25.56 thousand metric tons per year. The highest was recorded at 26.13 thousand metric tons in 2022 while the lowest was at 25.25 thousand metric tons in 2020. The per capita NFD remained at 0.23 kilogram throughout the reference period.

The country's production of strawberry reported an average increment of 58.8 percent over the reference years. In 2020, production was 1.20 thousand metric tons and grew to 1.78 thousand metric tons in 2021. Strawberry production continued to improve in 2022 at 3.02 thousand metric tons. The three-year average production of strawberry was posted at 2.00 thousand metric tons.

The volume of imported strawberry was recorded at 26 metric tons in 2020, it expanded to 347 metric tons in 2021 but dropped to less than one metric ton in 2022. Imports averaged 124 metric tons during the reference years. On the other hand, no exports of strawberry were reported from 2020 to 2022.

The total volume of strawberry available for food was estimated at an annual average of 2.00 thousand metric tons during the three-year period. It went up from 1.15 thousand metric tons in 2020 to 2.00 thousand metric tons in 2021. It further increased to 2.84 thousand metric tons in 2022. The per capita NFD for strawberry was computed at 0.01 kilogram, 0.02 kilogram, and 0.03 kilogram in 2020, 2021 and 2022, respectively.

The domestic production of watermelon declined throughout the reference years with an average annual reduction of -4.7 percent. From its highest production of 148.46 thousand metric tons in 2020, it was down to 135.85 thousand metric tons in 2021. In 2022, production further decreased and settled at 134.62 thousand metric tons. The average volume of watermelon production was 139.64 thousand metric tons.

During the three-year period, there was no recorded importation of watermelon. Meanwhile, exports were only registered in 2020 at less than one metric ton.

Total NFD averaged 131.26 thousand metric tons from 2020 to 2022. From 139.55 thousand metric tons in 2020, it went down to 127.70 thousand metric tons in 2021. In 2022, it continued to decline at 126.54 thousand metric tons. On per capita basis, NFD was highest in 2020 at 1.28 kilograms and lowest in 2022 at 1.13 kilograms. Annual per capita net food disposable averaged 1.19 kilograms per year.

The volume of locally produced cacao indicated an upward trend at an annual average of 5.8 percent during the reference years. Cacao production continued to increase from 9.34 thousand metric tons in 2020 to 10.45 thousand metric tons in 2022. The three-year average production of cacao was estimated at 9.93 thousand metric tons.

The imports of cacao fluctuated from 2020 to 2022. From 2.02 thousand metric tons in 2020, cacao imports declined to 1.77 thousand metric tons in 2021. Imports went up to 2.24 thousand metric tons in 2022. Exports of cacao continued to decrease from 5.15 thousand metric tons in 2020 to 2.76 thousand metric tons in 2022.

Over the period 2020 to 2022, the volume of cacao available for consumption was computed at an average of 7.80 thousand metric tons which corresponded to an average annual growth of 26.6 percent. In per capita terms, NFD averaged 0.07 kilogram per year during the period.

The country's production of coconut registered an annual average increment of 1.5 percent. From 14.49 million metric tons in 2020, production went up to 14.72 million metric tons in 2021 and further improved to 14.93 million metric tons in 2022. The average coconut production was posted at 14.71 million metric tons during the period.

The volume of imported coconut was less than one metric ton each in 2020 and 2021. There was no reported importation of coconut in 2022. Meanwhile, exports of coconut exhibited fluctuating trend throughout the reference years. From 225 metric tons in 2020, it rose to 586 metric tons in 2021 and settled at 278 metric tons in 2022.

On the average, the NFD of coconut was estimated at 735.63 thousand metric tons per year. The highest was recorded at 746.54 thousand metric tons in 2022 while the lowest at 724.53 thousand metric tons was in 2020. The annual per capita NFD averaged 6.68 kilograms during the three-year period.

The domestic production of coffee posted a downtrend from the 30.32 thousand metric tons in 2020 to 29.96 thousand metric tons in 2022. On the average, coffee production declined annually by -0.6 percent or an average of 30.19 thousand metric tons during the reference years.

Importation of coffee averaged 44.33 thousand metric tons over the period 2020 to 2022. The volume of imports was highest in 2022 at 48.75 thousand metric tons and lowest in 2021 at 37.97 thousand metric tons. On the other hand, coffee exports ranged from 18 metric tons in 2020 to 23 metric tons in 2021. Coffee was exported at an average of 21 metric tons from 2020 to 2022.

The average NFD for coffee was derived at 52.90 thousand metric tons. In 2020, it was 54.37 thousand metric tons and in 2021, it was down to 48.45 thousand metric tons. It settled at 55.87 thousand metric tons in 2022. On a per capita basis, NFD was 0.50 kilogram each in 2020 and 2022. In 2021, it was computed at 0.44 kilogram. The annual per capita NFD averaged 0.48 kilogram during the period.

During the three-year period, the local production of beef posted an average growth of 1.6 percent. Beef production increased from 134.29 thousand metric tons in 2020 to 138.38 thousand metric tons in 2021. It expanded to 138.70 thousand metric tons in 2022. The average volume of beef production was 137.12 thousand metric tons per year.

The country's importation of beef averaged 117.74 thousand metric tons from 2020 to 2022. The reported volume of imported beef in 2022 was 138.98 thousand metric tons, which showed an uptrend from 94.99 thousand metric tons in 2020. The volume of beef exports was reported at 34 metric tons in 2021 and 30 metric tons in 2020. Meanwhile, there was no record of beef exportation in 2022.

The total net food disposable for beef carcass continued to increase during the reference years at an average of 11.5 percent or 211.90 thousand metric tons. From 188.49 thousand metric tons in 2020, it increased to 212.79 thousand metric tons in 2021. Further increment was observed in 2022 at 234.44 thousand metric tons. The annual average net food disposable was computed at 1.92 kilograms per person.

In the case of beef offal, the total volume available for consumption averaged 29.22 thousand metric tons. In 2020, it was estimated at 27.33 thousand metric tons, and went up to 30.97 thousand metric tons in 2021. In 2022, net food disposable settled at 29.37 thousand metric tons. The average per capita net food disposable during the period was noted at 0.27 kilogram per year.

The country's production of carabeef registered an annual average increment of 4.1 percent from 2020 to 2022. Production was 70.57 thousand metric tons in 2020 and expanded to 75.81 thousand metric tons in 2021. It further improved to 76.35 thousand metric tons in 2022. On the average, carabeef production was 74.24 thousand metric tons.

Importation of carabeef continued to increase from 31.11 thousand metric tons in 2020 to 47.57 thousand metric tons in 2022. Imports averaged 40.63 thousand metric tons during the reference years. On the other hand, exports of carabeef were only reported in 2020 at 28 metric tons.

The three-year net food disposable for carabeef carcass was figured at an average of 103.89 thousand metric tons. It was recorded at 91.23 thousand metric tons in 2020 and rose to 112.64 thousand metric tons in 2022. On per capita basis, net food disposable ranged from 0.84 kilogram per year in 2020 to 1.01 kilograms per year in 2022.

For carabeef, the total net food disposable posted an annual average of 10.90 thousand metric tons. It exhibited an increasing trend from 10.36 thousand metric tons in 2020 to 11.13 thousand metric tons in 2021 and 11.21 thousand metric tons in 2022. The derived annual per capita net food disposable remained at 0.10 kilogram from 2020 to 2022.

Over the three-year period, the domestic production of chevon recorded an average decline of -0.9 percent. The highest production was noted at 42.60 thousand metric tons in 2021, while the lowest production was recorded at 41.06 thousand metric tons in 2022. The average production of chevon was 41.83 thousand metric tons.

There were no foreign trade transactions for chevon during the reference years.

The volume of chevon carcass available for food consumption averaged 31.55 thousand metric tons from 2020 to 2022. In 2020, the NFD of chevon carcass was 31.56 thousand metric tons and increased to 32.14 thousand metric tons in 2021. The total NFD decreased to 30.97 thousand metric tons in 2022. Per capita NFD was estimated at 0.29 kilogram in 2020 and 2021. In 2022, it was computed at 0.28 kilogram. Average per capita NFD during the three-year period was 0.29 kilogram per year.

The total volume of chevon offal available for consumption was recorded at an annual average of 10.28 thousand metric tons. The highest was estimated at 10.47 thousand metric tons in 2021, while the lowest was derived at 10.09 thousand metric tons in 2022. In per capita terms, NFD was constant at 0.09 kilogram per year from 2020 to 2022.

From 2020 to 2022, the average volume of pork production was recorded at 1.57 million metric tons, with an average decline of -9.2 percent. It declined from 1.81 million metric tons in 2020 to 1.43 million metric tons in 2021, and slightly improved to 1.46 million metric tons in 2022.

During the reference period, an increasing trend was observed for pork imports from 179.67 thousand metric tons in 2020 to 494.94 thousand metric tons in 2021. It further increased to 639.06 thousand metric tons in 2022. Meanwhile, the volume of pork exports was registered at 28 metric tons in 2020 and 5 metric tons in 2021. In 2022, no exportation of pork was noted.

The total NFD for pork carcass averaged 1.53 million metric tons during the reference years. The highest NFD was estimated in 2022 at 1.59 million metric tons and lowest in 2021 at 1.44 million metric tons. In per capita basis, NFD was computed at 14.30 kilograms in 2020, 13.08 kilograms in 2021, and 14.24 kilograms in 2022. The average per capita NFD during the period was 13.88 kilograms per year.

On average, the total volume of pork offal available for consumption figured to 457.67 thousand metric tons. It increased from 409.14 thousand metric tons in 2020 to 466.80 thousand metric tons in 2021 and went up to 497.08 thousand metric tons in 2022. The estimated per capita NFD ranged from 3.76 kilograms in 2020 to 4.46 kilograms in 2022.

Production of dressed chicken increased at an average of 1.7 percent over the reference years. In 2020, the volume of dressed chicken production was posted at 1.39 million metric tons and went down to 1.34 million metric tons in 2021. In 2022, the level of production recovered and settled at 1.44 million metric tons. The average domestic production of dressed chicken was 1.39 million metric tons during the period.

The reported volume of imported dressed chicken averaged 155.51 thousand metric tons from 2020 to 2022. In 2022, the total volume of dressed chicken imports was 193.99 thousand metric tons, an increase of 16.8 percent from the 166.06 thousand metric tons chicken imports in 2021. During the reference years, the recorded average growth of chicken imports was 36.4 percent. On the other hand, the volume of dressed chicken exports recorded an annual average decline of -49.8 percent, which corresponded to an average of 147 metric tons during the reference years. It was highest in 2020 at 251 metric tons and lowest in 2022 at 63 metric tons.

The average quantity of dressed chicken available for food was 1.55 million metric tons. During the three-year period, NFD showed an increasing pattern with an average growth rate of 4.4 percent. From 1.50 million metric tons in 2020, the total NFD increased to 1.63 million metric tons in 2022. Per capita NFD was highest in 2022 at 14.62 kilograms and lowest in 2021 at 13.70 kilograms. The average annual per capita NFD was 14.04 kilograms during the reference years.

Domestic production of dressed duck exhibited a downtrend with an average decline of -5.7 percent from 2020 to 2022. The production of dressed duck in 2020 at 22.16 thousand metric tons dropped to 21.83 thousand metric tons in 2021 and further declined to 19.69 thousand metric tons in 2022. The average production of dressed duck was recorded at 21.23 thousand metric tons.

The average volume of imported dressed duck from 2020 to 2022 was 77 metric tons. It decreased from 62 metric tons in 2020 to five metric tons in 2021. In 2022, the bulk of imports was registered at 162 metric tons. There were no reported exports of dressed duck from 2020 to 2022.

Over the period 2020 to 2022, the computed total net food disposable continued to decline at an average of -5.4 percent or 21.30 thousand metric tons. From 22.22 thousand metric tons in 2020, it decreased to 21.83 thousand metric tons in 2021. Further contraction was observed in 2022 at 19.85 thousand metric tons. The estimated per capita NFD was 0.20 kilogram both in 2020 and 2021. In 2022, the per capita NFD was 0.18 kilogram per person.

From 2020 to 2022, the local production of chicken egg registered an upward trend with an annual average increment of 8.2 percent. Chicken egg production in 2022 at 708.50 thousand metric tons increased by 7.1 percent from 661.39 thousand metric tons in 2021. Average production was recorded at 658.56 thousand metric tons.

There was no record of imports of chicken egg during the three-year period. Meanwhile, the volume of chicken egg exports was less than one metric ton in 2021.

The average NFD for chicken egg was computed at 605.87 thousand metric tons during the reference period. Total NFD was estimated at 557.32 thousand metric tons in 2020, 608.48 thousand metric tons in 2021, and 651.82 thousand metric tons in 2022. Annual per capita NFD ranged from 5.12 kilograms in 2020 to 5.84 kilograms in 2022. It averaged 5.50 kilograms per capita per year during the reference period.

The quantity of locally produced duck egg posted an average increment of 5.1 percent over the three-year period. In 2022, the highest production was noted at 55.64 thousand metric tons, while the lowest was reported in 2021 at 50.45 thousand metric tons. On average, production of duck egg was 52.19 thousand metric tons.

There were no registered imports of duck egg from 2020 to 2022. On the other hand, the recorded exportation of duck egg was less than one metric ton in 2020, two metric tons in 2021, and one metric ton in 2022.

The total NFD for duck egg averaged 49.06 thousand metric tons over the reference years. It decreased from 47.45 thousand metric tons in 2020 to 47.42 thousand metric tons in 2021. In 2022, it settled at 52.30 thousand metric tons. On per capita terms, the net food disposable averaged 0.45 kilogram per year.

From 2020 to 2022, the local production of milkfish registered an average annual decline of -3.3 percent. Production increased from 420.96 thousand metric tons in 2020 to 446.38 thousand metric tons in 2021. However, it declined to 390.10 thousand metric tons in 2022. During the period, production of milkfish averaged 419.15 thousand metric tons.

The volume of imported milkfish recorded an average of 492 metric tons during the reference years. The highest importation was noted in 2021 at 627 metric tons and lowest in 2022 at 311 metric tons. Meanwhile, bulk of the exports was posted at 6.87 thousand metric tons in 2021. Exports averaged 5.70 thousand metric tons throughout the period.

The quantity of milkfish available for consumption during the three-year period averaged 267.24 thousand metric tons. The derived per capita NFD was highest in 2021 at 2.58 kilograms and lowest in 2022 at 2.24 kilograms. The annual per capita NFD from 2020 to 2022 averaged 2.43 kilograms per year.

The country's annual production of roundscad decreased by an average of -6.9 percent for the three-year period. It exhibited a continued decline from 202.00 thousand metric tons in 2020 to 174.71 thousand metric tons in 2022. On the average, roundscad production was 186.08 thousand metric tons.

During the reference years, imports of roundscad averaged 46.37 thousand metric tons. It was highest in 2021 at 61.59 thousand metric tons and was lowest in 2020 at 24.05 thousand metric tons. From two metric tons in 2020, roundscad exports peaked to 708 metric tons in 2021 and dropped to 44 metric tons in 2022. An average of 251 metric tons of roundscad was exported during the period.

The total NFD for roundscad was derived at an average of 167.07 thousand metric tons over the reference years. It was 155.35 thousand metric tons in 2020 and went up to 178.87 thousand metric tons in 2021. It decreased to about 167.00 thousand metric tons in 2022. The estimated per capita net food disposable ranged from 1.43 kilograms in 2020 to 1.62 kilograms in 2021. In 2022, per capita net food disposable for milkfish was 1.50 kilograms.

Tilapia production inched up by an average of 0.6 percent during the reference period. The volume of tilapia production was highest in 2021 at 340.07 thousand metric tons and was lowest in 2022 at 303.95 thousand metric tons. It averaged 316.12 thousand metric tons from 2020 to 2022.

The total volume of imports of tilapia in 2021 was recorded at 227 metric tons, an increase of 1,553.0 percent from 14 metric tons in 2020. There were no reported imports of tilapia in 2022. Meanwhile, the volume of tilapia exports in 2021 was registered at 36 metric tons.

On average, the total volume of tilapia available for food consumption was 306.70 thousand metric tons from 2020 to 2022. From 295.21 thousand metric tons in 2020, total NFD grew to 330.06 thousand metric tons in 2021. In 2022, the total NFD settled at 294.83 thousand metric tons. Meanwhile, the per capita NFD for tilapia was computed at 2.71 kilograms in 2020, 3.00 kilograms in 2021, and 2.64 kilograms in 2022. Annual per capita net food disposable averaged at 2.78 kilograms per year during the reference period.

Over the period 2020 to 2022, the domestic production of tuna fluctuated with an average contraction of -4.1 percent. From 520.17 thousand metric tons in 2020, production decreased to 462.40 thousand metric tons in 2021 and went up to 475.87 thousand metric tons in 2022. Annual average production of tuna was recorded at 486.14 thousand metric tons.

The volume of imported tuna was 177.60 thousand metric tons in 2020 and rose to 207.82 thousand metric tons in 2021. However, imports of tuna went down to 164.95 thousand metric tons in 2022. The total volume of tuna exports was registered at 43.10 thousand metric tons in 2020, 10.58 thousand metric tons in 2021, and 14.48 thousand metric tons in 2022. It corresponded to an average of -19.3 percent reduction for the three-year period.

The volume of tuna available for consumption averaged 476.73 thousand metric tons during the reference years. It was highest at 497.80 thousand metric tons in 2021 and was lowest at 459.79 thousand metric tons in 2022. In per capita terms, NFD ranged from 4.12 kilograms in 2022 to 4.52 kilograms in 2021. It averaged 4.33 kilograms per year during the period.

During the three-year period, the country's production of crab decreased by an annual average of -6.7 percent. In 2021, production was highest at 58.72 thousand metric tons and lowest in 2022 at 44.80 thousand metric tons. The average production was estimated at 52.25 thousand metric tons.

Fluctuating trend was observed for crab imports throughout the reference years. From 19 metric tons in 2020, importation was reduced to five metric tons in 2021. It made a turnaround and increased to 99 metric tons in 2022. On the other hand, exports of crab showed an uptrend from 3.21 thousand metric tons in 2020 to 5.97 thousand metric tons in 2022. Exports registered an annual average of 4.82 thousand metric tons.

The total net food disposable for crab was computed at an average of 46.69 thousand metric tons from 2020 to 2022. From 49.25 thousand metric tons in 2020, it increased to 52.56 thousand metric tons in 2021. In 2022, it dropped to 38.25 thousand metric tons or equivalent to 0.34 kilogram per capita. The per capita net food disposable averaged 0.42 kilogram per year from 2020 to 2022.

The local production of shrimps and prawns contracted annually by an average of -9.4 percent from 2020 to 2022. Production was noted at 48.74 thousand metric tons in 2020 and went up to 51.12 thousand metric tons in 2021. In 2022, production dropped to 38.98 thousand metric tons. The average volume of production for shrimps and prawns was 46.28 thousand metric tons during the period.

Over the reference years, an upward trend in importation was reported for shrimps and prawns. From 1.79 thousand metric tons in 2020, it reached to 3.13 thousand metric tons in 2022. Imports averaged 2.30 thousand metric tons. Meanwhile, exports fluctuated during the period. The highest volume of exported shrimps and prawns was registered in 2021 at 3.69 thousand metric tons while the lowest was monitored in 2020 at 2.70 thousand metric tons. In 2022, exports of prawn was at 3.09 thousand metric tons.

Total net food disposable for shrimps and prawns averaged 44.72 thousand metric tons. It was 47.10 thousand metric tons in 2020 and increased to 48.63 thousand metric tons in 2021. Then in 2022, it was down to 38.44 thousand metric tons. On a per capita basis, net food disposable was highest in 2021 at 0.44 kilogram while lowest in 2022 at 0.34 kilogram. It was computed at an average of 0.41 kilogram per year during the period.

The volume of locally produced mussel posted an average reduction of -15.4 percent during the reference years. It expanded from 19.23 thousand metric tons in 2020 to 23.71 thousand metric tons in 2021 and dropped to 10.89 thousand metric tons in 2022. The average production was estimated at 17.94 thousand metric tons.

The volume of mussel imports averaged 185 metric tons from 2020 to 2022. It was highest at 252 metric tons in 2022 and lowest at 145 metric tons in 2021. Meanwhile, exports were noted in 2020 at 49 metric tons and in 2021 at 22 metric tons.

The total NFD for mussel averaged 17.83 thousand metric tons. From 19.05 thousand metric tons in 2020, it increased to 23.47 thousand metric tons in 2021 and declined to 10.98 thousand metric tons in 2022. The per capita NFD for mussel was estimated at 0.10 kilogram in 2022 to 0.21 in 2021.

The total volume of oyster production exhibited a downtrend at an average of -13.5 percent contraction during the three-year period. In 2020, it was reported at 55.76 thousand metric tons and declined to 42.29 thousand metric tons in 2021. It continued to decline in 2022 and settled at 41.05 thousand metric tons. Average production was recorded at 46.37 thousand metric tons during the period.

On average, there were 24 metric tons of imported oyster from 2020 to 2022. From 40 metric tons in 2020, it dropped to 11 metric tons in 2021. In 2022, imports went up to 20 metric tons. Exports were reported at 48 metric tons in 2020 and 31 metric tons in 2021. There were no recorded exports of oyster in 2022.

The volume of oyster available for consumption was computed at an average of 45.67 thousand metric tons. In 2020, the total net food available was highest at 54.92 thousand metric tons and lowest in 2022 at 40.46 thousand metric tons. In per capita terms, the net food disposable was 0.50 kilogram in 2020, 0.38 kilogram in 2021, and 0.36 kilogram in 2022.

The local production of abaca recorded an average contraction of -1.7 percent annually from 2020 to 2022. It went down from 70.95 thousand metric tons in 2020 to 62.40 thousand metric tons in 2021. However, production improved to 67.82 thousand metric tons in 2022. The three-year average production was 67.06 thousand metric tons.

Abaca imports averaged 5.91 thousand metric tons which corresponded to an average of -6.9 percent decline during the reference period. It was highest in 2021 at 8.03 thousand metric tons and lowest in 2022 at 3.88 thousand metric tons. Likewise, volume of abaca exports decreased from 13.81 thousand metric tons in 2020 to 11.17 thousand metric tons in 2022. The estimated quantity of exported abaca averaged at 13.41 thousand metric tons.

On the average, the volume of abaca for domestic use was computed at 59.56 thousand metric tons. It was 62.96 thousand metric tons in 2020 and 55.19 thousand metric tons in 2021. In 2022, it was estimated at 60.53 thousand metric tons.

The total volume of cotton production declined at an annual average rate of -5.8 percent. The highest volume of cotton production was noted in 2020 at 41 metric tons while the lowest was recorded in 2021 at 27 metric tons. In 2022, cotton production was 33 metric tons. It averaged 34 metric tons during the reference years.

From 10.10 thousand metric tons in 2020, total volume of cotton imports increased to 11.76 thousand metric tons in 2021. In 2022, it declined to 10.09 thousand metric tons. Similarly, cotton exports fluctuated and recorded an average of 1.41 thousand metric tons from 2020 to 2022. From 607 metric tons of exports in 2020, it peaked to 1.94 thousand metric tons in 2021 and went down to 1.69 thousand metric tons in 2022.

From 2020 to 2022, the average volume of cotton for local use was estimated at 9.27 thousand metric tons. The total NFD of cotton was lowest in 2022 at 8.43 thousand metric tons and highest in 2021 at 9.85 thousand metric tons.

Production was converted to natural rubber

Source: Philippine Statistics Authority

The country's production of rubber registered an annual average reduction of -0.8 percent from 2020 to 2022. It was estimated at 211.20 thousand metric tons in 2020 and increased to 215.32 thousand metric tons in 2021. In 2022, rubber production dropped to 207.88 thousand metric tons. An average of 211.47 thousand metric tons was produced during the period.

On average, rubber importation was 52.93 thousand metric tons during the reference period. In 2020, imported rubber was registered at 39.73 thousand metric tons. It grew to 58.43 thousand metric tons in 2021 and further expanded to 60.64 thousand metric tons in 2022. Meanwhile, exports of rubber averaged 183.87 thousand metric tons. It was highest in 2021 at 202.36 thousand metric tons and lowest in 2020 at 158.33 thousand metric tons.

The average volume of rubber for domestic use was figured at 80.53 thousand metric tons. From 92.60 thousand metric tons in 2020, NFD went down to 71.39 thousand metric tons in 2021. In 2022, it settled at 77.60 thousand metric tons.

The volume of locally produced tobacco posted an average decline of -4.6 percent during the reference years. In 2020, the total volume of tobacco production was noted at 52.44 thousand metric tons and was down to 50.93 thousand metric tons in 2021. It continued to decline to 47.73 thousand metric tons in 2022. The average production of tobacco was 50.37 thousand metric tons during the period.

Total volume of tobacco imports averaged 48.54 thousand metric tons from 2020 to 2022. The highest volume of imports was recorded in 2022 at 54.46 thousand metric tons, while the lowest was reported in 2021 at 44.67 thousand metric tons. On the other hand, exports of tobacco increased from 32.42 thousand metric tons in 2020 to 40.76 thousand metric tons in 2021 and settled at 39.44 thousand metric tons in 2022.

The volume of tobacco available for local use averaged 56.33 thousand metric tons which corresponded to an average of -1.1 percent reduction from 2020 to 2022. The highest was estimated in 2020 at 61.28 thousand metric tons and lowest in 2021 at 49.75 thousand metric tons.
