

10-DAY REGIONAL AGRI-WEATHER INFORMATION

DECADE NO. 31

NOVEMBER 1 – 10, 2016

PHILIPPINE AGRI-WEATHER FORECAST

The weather systems that will affect the whole country are northeast monsoon, low pressure area (LPA), and intertropical convergence zone (ITCZ).

During the decade, Extreme Northern Luzon, Ilocos Norte and Cagayan Valley will continue to experience light rains due to northeast monsoon. A LPA embedded in the ITCZ may develop into a tropical cyclone which will bring cloudiness with light to moderate rains over southern and eastern sections of Luzon and in some parts of Mindanao. The rest of the country will generally have a fair weather condition.

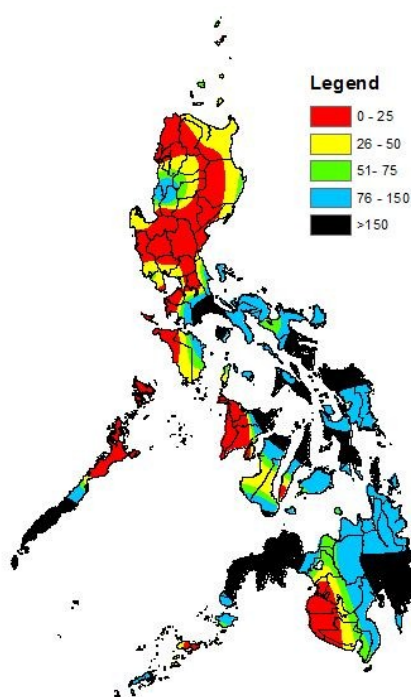

Winds blowing from northeast will prevail over Luzon and eastern Visayas and the coastal waters along these areas will be moderate to rough. Elsewhere, winds will be light to moderate coming from the northeast to northwest with slight to moderate seas.

The eastern and central equatorial Pacific is in neutral condition.

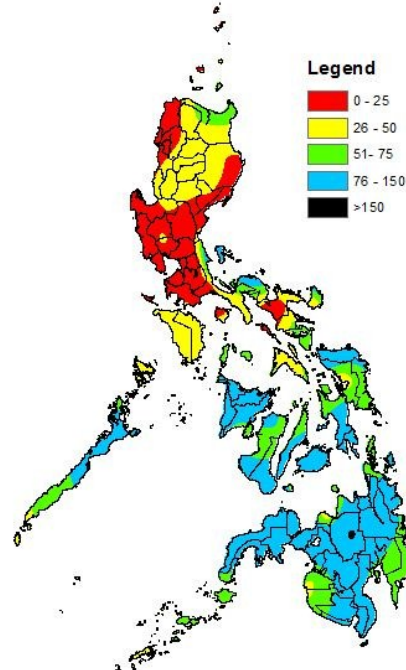

FARM ADVISORIES

Farmers are reminded to continue cleaning of drainage and irrigation canal embankments or levees destroyed by the heavy rains and floods. Drying of wet grains by using mechanical dryers or sundry to avoid deterioration and germination of grains especially those farms affected by typhoon Lawin.
