

SPECIAL RELEASE

Corn Production, Area Harvested and Yield in CALABARZON: First Quarter 2025 and 2026

Date of Release: June 15, 2026

Reference No.: 2026-0400-SR20

CALABARZON's Corn Production decreased by 4.3 percent in the first quarter of 2026

During the first quarter of 2026, corn production of CALABARZON decreased by 4.3 percent compared to the first quarter of 2025. A total of 15,767.41 metric tons were harvested, registering a 708.17 metric tons decrement compared to the first quarter of previous year.

Table 1. Corn Production, Area harvested and Yield in CALABARZON: First Quarter 2025 and 2026

Item	CORN		
	2025	2026	% change
Total Corn (Production)	16,475.58	15,767.41	-4.3
White Corn	4,565.25	5,237.02	14.7
Yellow Corn	11,910.34	10,530.39	-11.6
Total Corn (Area)	5,336.37	4,695.81	-12.0
White Corn	2,260.82	2,074.18	-8.3
Yellow Corn	3,075.55	2,621.63	-14.8
Total Corn (Average Yield)	3.09	3.36	8.8
White Corn	2.02	2.52	25.0
Yellow Corn	3.87	4.02	3.7

The harvested yellow corn in the region was recorded at 10,530.39 metric tons in the first quarter of 2026, posting a decrease of 11.6 percent compared to the production of 11,910.34 metric tons in the first quarter of 2025. On the other hand, the total harvested white corn was recorded at 5,237.02 metric tons, incurring an increase of 14.7 percent compared to the 4,565.25 metric tons harvested on the same period last year (Figure 1).

Total Area harvested for corn dropped by 12.0 percent

In the first quarter of 2026, the total corn area harvested in CALABARZON region was 4,695.81 hectares, registering a 12.0 percent decrease compared to the same quarter of the previous year.

The share of yellow corn was more than 55 percent of the total corn area harvested in the region comprising 2,621.63 hectares. It posted a decrease of 14.8 percent or about 453.92 hectares compared to the same quarter of the previous year. On the other hand, the total area harvested of white corn was recorded at 2,074.18 hectares, also recording a decrease of 8.3 percent or about 186.64 hectares (Figure 2).

Figure 2. Area Harvested of Corn in CALABARZON, by Crop Type, First Quarter 2025 and 2026, in hectares

Average corn yield went up by 8.8 percent in the first quarter of 2026

The average yield of corn in CALABARZON grew by 8.8 percent in the first quarter of 2026. Corn yield went up from 3.09 metric tons per hectare in the first quarter of 2025 to 3.36 metric tons per hectare in the first quarter of 2026.

The yield of white corn increased from 2.02 metric tons per hectare to 2.52 metric tons per hectare. Also, yellow corn grew from 3.87 metric tons per hectare to 4.02 metric tons per hectare. (Figure 3).

TECHNICAL NOTES

The Corn Production Survey (CPS) is one of the major agricultural surveys conducted by the Philippine Statistics Authority (PSA). The CPS is a quarterly survey which generates estimates on corn production, area, yield, and other production-related data that serve as inputs for policy making and programs on corn.

Specifically, the production data generated from the survey are direct inputs to the Value of Production in Philippine Agriculture and Fisheries and to the computation of Gross Domestic Product (GDP), accordingly.

Moreover, the survey supports the data needs of planners, policy and decision makers, and other stakeholders in the agriculture sector, particularly the National Economic and Development Authority (NEDA), Department of Agriculture (DA) and its attached agencies such as Philippine Rice Research Institute (PhilRice), Philippine Council for Agriculture, and Fisheries (PCAF), and the general public.

The outputs from the CPS are disseminated through special release, bulletin, publications, and statistical tables at the PSA Website and OpenSTAT portal, as follows:

- a. Bulletin (quarterly)
Palay and Corn Quarterly Bulletin
- b. Infographics (quarterly)
Palay and Corn
- c. Publication (annual)
Crop Statistics of the Philippines
Corn Production in the Philippines
- d. Statistical Tables at OpenSTAT portal
Palay and Corn: Volume of Production by Ecosystem/Crop Type, by Quarter, by Semester, by Year, by Region and by Province
Palay and Corn: Area Harvested by Ecosystem/ Crop Type, by Quarter, by Semester, by Year, by Region and by Province

Production refers to the quantity produced and actually harvested for a particular crop during the reference period. For corn, harvest area refers to the actual area harvested during the reference quarter.

Area harvested – actual area from which harvests are realized.

Yield – an indicator of productivity derived by dividing total production by the area harvested.
