SUPPLY UTILIZATION ACCOUNTS OF SELECTED AGRICULTURAL COMMODITIES

FOREWORD

This annual publication on Supply Utilization Accounts (SUA) of Selected Agricultural Commodities is the 35th edition released by the Philippine Statistics Authority (PSA). It covers the reference period 2019 to 2021. A total of 82 agricultural commodities are included and classified into ten (10) major groups, i.e., Cereals, Rootcrops, Vegetables and Legumes, Nuts, Fruits, Commercial Crops, Livestock, Poultry, Non-Food Crops, and Fish and Fishery Products.

Each commodity contains a brief description of the SUA to guide data users in understanding the physical accounting of the selected agricultural commodities. The SUA tables also allow users to compute other food security indicators such as self-sufficiency ratio and import dependency ratio.

The PSA welcomes comments and suggestions from the data users for further improvement of this publication.

SUPPLY UTILIZATION ACCOUNTS OF SELECTED AGRICULTURAL COMMODITIES

TECHNICAL NOTES

Concepts/Definitions

Supply Utilization Accounts is a comprehensive statistical framework for the physical accounting of agricultural commodities produced in the country.

A. Supply Elements

Supply - is the quantity of food supplies available before disposal to food and non-food uses. It comprises of Beginning Stocks, Production, and Imports.

Beginning Stock - refers to the quantity of the commodity available at the beginning of the reference period. This includes stocks held at various levels from the farm to final consumption or consumers of the commodity usually at the household level. It also includes that part of imports in stocks.

Production - relates to the total domestic production that takes place during the reference period. It includes commercial and backyard production.

Imports - refer to all goods entering any of the seaports or airports of entry of the Philippines properly cleared through the Customs or remaining under the Customs control, whether the goods are for direct consumption, for merchandising (global manufacturing, global trade in commodities), for warehousing or for further processing.

B. Utilization Elements

Utilization - comprises of seeds, feeds and waste, processing, exports, and the balance which represents the Net Food Disposable.

Seeds - is the amount of commodity allotted for seeds or in general for production purposes.

Feeds - refer to the amount of food commodity allotted for animals or livestock/poultry during the reference period.

Wastage - is the amount of food commodity wasted during the reference period at various stages from farm to retail level as in processing, storage, and transport.

Processing - is the volume of the commodity used as inputs or raw material for manufacturing into food and non-food items.

SUPPLY UTILIZATION ACCOUNTS OF SELECTED AGRICULTURAL COMMODITIES

Export - refers to all goods leaving the country which are properly cleared through the Customs.

Net Food Disposable - refers to the volume of food commodity available in its original (unprocessed) form for human consumption. Net food disposable (NFD) is the remaining balance after all the "use" parameters are taken into account. The net food disposable in per capita per year and in per capita per day are expressed in kilograms and grams, respectively.

Ending Stock - is the stock of commodity available at the end of the reference period. This includes stock held at the various levels, i.e., households, traders, government, and commercial warehouses

Carcass - the body of any slaughtered animal after the removal of the offals.

Offals - the by-product and other edible parts such as head, tail, organ glands, and other tissue meat of the animals.

Estimation Procedures

1. The average levels presented in the statistical tables are derived by dividing the sum of the three-year data by three (3). The average growth rates are derived by dividing the sum of growth rates by two (2).
2. The unit of measurement is metric ton except for palay and corn which is in thousand metric tons.
3. The derived per capita net food disposable (NFD) per year is expressed in kilograms while per capita NFD per day is expressed in grams.
4. Export and import data are taken from the Trade Statistics Division of the Philippines Statistics Authority (PSA).
5. The estimation of per capita NFD for 2019 to 2021 is based on mid-year population projection from the 2015 Census of Population and Housing (CPH).
6. The blank spaces in the tables indicate that there are no data available.

SUPPLY UTILIZATION ACCOUNTS OF SELECTED AGRICULTURAL COMMODITIES

7. Some commodity descriptions:
- a. Coffee – production is converted to green bean equivalent while trade data are already expressed in green bean equivalent.
 - b. Sugarcane – includes all production in cane for centrifugal, chewing, panocha/muscovado, “basi”/vinegar, and ethanol.
 - c. Abaca – production is in dried raw fiber expressed in metric tons.
 - d. Cotton – in cotton seed form.
 - e. Rubber – production is converted to natural rubber equivalent while trade data are already expressed in natural rubber.
 - f. Tobacco – in dry leaf.
 - g. Tuna – includes skipjack, yellowfin, frigate, big-eye, and eastern little tuna. Tuna-like species are not included.

a. FOOD COMMODITY

1. Estimation of Gross Supply (GS)

$$GS = \text{Beginning Stock} + \text{Production} + \text{Imports}$$

2. Estimation of Net Supply Disposable (NSD)

$$NSD = \text{Gross Supply} - (\text{Exports} + \text{Ending Inventory})$$

3. Estimation of Net Food Disposable (NFD)

$$NFD = NSD - (F + S + W + FU + NFU)$$

Where: NSD	= net supply disposable
F	= quantity used for feeds
S	= quantity used for seeds
W	= quantity lost/spoiled (waste)
FU	= quantity processed for food use
NFU	= quantity processed for non-food use

**SUPPLY UTILIZATION ACCOUNTS OF
SELECTED AGRICULTURAL COMMODITIES**

4. Estimation of Per Capita Net Food Disposable (NFD)

$$\text{NFD (kg/yr)} = \frac{\text{Total NFD}}{\text{Population}}$$

$$\text{NFD (grams/day)} = \frac{\text{NFD (kg/yr)}}{365 \text{ (days)}} \times 1000$$

b. NON-FOOD COMMODITY

1. Estimation of Total Supply

$$\text{TS} = \text{Production} + \text{Imports}$$

2. Estimation of Domestic Use (DU)

$$\text{DU} = \text{Total Supply} - (\text{Exports} + \text{Seeds} + \text{Wastes})$$

a/ - Less than 1 thousand metric tons

Source: Philippine Statistics Authority

From 2019 to 2021, the local rice production registered an average growth of 3.0 percent. Rice production was recorded at 12.31 million metric tons in 2019, 12.62 million metric tons in 2020, and 13.05 million metric tons in 2021. On the average, production was estimated at 12.66 million metric tons during the reference years.

In 2019, volume of imported rice was recorded at 3.12 million metric tons and decreased to 2.22 million metric tons in 2020. Rice imports reached 2.97 million metric tons in 2021. It averaged 2.77 million metric tons throughout the three-year period. Meanwhile, exports of rice remained at less than one thousand metric tons during the reference years.

Over the three-year period, the total net food disposable averaged 14.10 million metric tons. From 13.78 million metric tons in 2019, it went down to 13.62 million metric tons in 2020 and settled at 14.89 million metric tons in 2021. On a per capita basis, the average net food disposable from 2019 to 2021 was 129.59 kilograms. It increased from 128.42 kilograms in 2019 to 135.09 kilograms in 2021.

The domestic production of corn recorded an increasing trend. From 7.98 million metric tons in 2019, it went up to 8.12 million metric tons in 2020, and further increased to 8.30 million metric tons in 2021. It averaged 8.13 million metric tons and registered an average of 2.0 percent increment from 2019 to 2021.

During the reference period, fluctuating trend was observed for corn imports. From 458 thousand metric tons in 2019, it reached 769 thousand metric tons in 2020. In 2021, corn imports were reduced to 460 thousand metric tons. It averaged 562 thousand metric tons during the period. Meanwhile, exports were recorded at two thousand metric tons in 2020 and less than one thousand metric tons in 2019 and 2021. It corresponded to an average of 129.1 percent increase for the three-year period.

The total amount of corn available for consumption averaged 2.33 million metric tons during the reference years. The amount went up from 2.00 million metric tons in 2019 to 2.37 million metric tons in 2020. In 2021, net food disposable was at 2.61 million metric tons or equivalent to 23.71 kilograms on a per capita basis. The per capita net food disposable was estimated at an average of 21.39 kilograms during the reference years.

Cassava production continued to decline at an average of -1.4 percent during the reference period. In 2019, it was estimated at 2.63 million metric tons and was down to 2.61 million metric tons in 2020. It further declined to 2.56 million metric tons in 2021. Cassava production posted an average of 2.60 million metric tons during the three-year period.

During the three-year period, no importation was recorded. However, exports of cassava showed an increasing trend from 809 metric tons in 2019 to 1.32 thousand metric tons in 2020. In 2021, it went up to 2.01 thousand metric tons. Exports of cassava for the three-year period registered an average of 1.38 thousand metric tons.

The volume of cassava available for food was estimated at an average of 259.73 thousand metric tons from 2019 to 2021 or equivalent to 2.39 kilograms per capita. For 2021, the per capita net food disposable was computed at 2.32 kilograms.

From 2019 to 2021, gabi production increased by an average of 2.6 percent. It was highest in 2021 at 110.55 thousand metric tons and lowest in 2019 at 104.94 thousand metric tons. In 2020, it was recorded at 107.42 thousand metric tons. During the reference years, gabi production averaged 107.64 thousand metric tons.

Gabi had the highest recorded imports in 2019 at 122 metric tons while the lowest was in 2020 at 44 metric tons. In 2021, 75 metric tons of imported gabi was registered. In case of exports, the highest was in 2020 at three metric tons while the lowest was in 2019 at less than one metric ton. Exports settled at two metric tons in 2021.

On the average, the total net food disposable for gabi was 101.96 thousand metric tons during the three-year period. It was 99.45 thousand metric tons in 2019 and 101.72 thousand metric tons in 2020. It was computed at 104.72 thousand metric tons in 2021. Per capita net food disposable was 0.93 kilogram in 2019, 0.94 kilogram in 2020, and 0.95 kilogram in 2021.

Over the three-year period, production of pao galiang grew by an average of 4.6 percent. It exhibited an increasing trend from 2019 at 8.10 thousand metric tons to 8.60 thousand metric tons in 2020 and further expanded to 8.85 thousand metric tons in 2021. It averaged 8.52 thousand metric tons during the three-year period.

Pao galiang has no foreign trade transactions from 2019 to 2021.

Total net food disposable of pao galiang averaged 6.98 thousand metric tons. It was highest in 2021 at 7.26 thousand metric tons and lowest in 2019 at 6.64 thousand metric tons. The average per capita net food disposable was 0.06 kilogram during the three-year period.

Local production of potato declined by an average of -5.7 percent during the three-year period. In 2019, production was highest at 116.06 thousand metric tons and lowest in 2021 at 103.06 thousand metric tons. Average annual production was at 110.89 thousand metric tons during the reference period.

Potato imports averaged 26.04 thousand metric tons from 2019 to 2021. The highest imports recorded was in 2020 at 26.64 thousand metric tons and lowest in 2019 at 25.69 thousand metric tons. In 2021, 25.79 thousand metric tons of potato were imported. Meanwhile, exports reported an average of three metric tons from 2019 to 2021.

An average of 103.48 thousand metric tons of potato was available for consumption during the reference years. It was highest at 106.74 thousand metric tons in 2019 and lowest at 97.77 thousand metric tons in 2021. On per capita basis, net food disposable decreased from 0.99 kilogram in 2019 to 0.89 kilogram in 2021.

Sweet potato production increased by an average of 1.9 percent over the three-year period. From 525.86 thousand metric tons in 2019, it went up to 546.89 thousand metric tons in 2020. In 2021, it was recorded at 545.52 thousand metric tons. It averaged 539.42 thousand metric tons during the reference years.

Imported sweet potato was recorded at less than one metric ton in 2019 and 24 metric tons in 2020. However, there was no importation of sweet potato in 2021. Exports dropped from 733 metric tons in 2019 to 623 metric tons in 2020. It continued to decline in 2021 at 29 metric tons. The average exports of sweet potato for 2019 to 2021 was 462 metric tons.

Total net food disposable of sweet potato averaged 510.33 thousand metric tons during the reference period. It was highest at 517.27 thousand metric tons in 2020 while lowest at 497.17 thousand metric tons in 2019. In 2021, total net food disposable was 516.55 thousand metric tons. The annual per capita net food disposable was 4.63 kilograms in 2019, 4.76 kilograms in 2020, and 4.69 kilograms in 2021.

Ampalaya production decreased by an average of -0.6 percent during the reference period. The highest production at 89.34 thousand metric tons was recorded in 2019 while the lowest was in 2020 at 87.80 thousand metric tons. About 88.22 thousand metric tons of ampalaya was produced in 2021. During the reference period, it averaged 88.45 thousand metric tons.

There was no record of ampalaya imports during the three-year period. However, it was exported in 2021 at one metric ton.

The quantity of ampalaya available for consumption averaged 81.35 thousand metric tons corresponded to -0.6 percent decline during the three-year period. It was highest in 2019 at 82.17 thousand metric tons and lowest in 2020 at 80.76 thousand metric tons. In 2021, it was estimated at 81.13 thousand metric tons. The annual per capita net food disposable was recorded at 0.77 kilogram in 2019 and 0.74 kilogram both in 2020 and 2021.

A downward trend was recorded for asparagus production which averaged -19.2 percent during the three-year period. From 1.33 thousand metric tons in 2019, it decreased to 1.06 thousand metric tons in 2020 and continued to decline to 867 metric tons in 2021. The average production for asparagus during the period was 1.08 thousand metric tons.

Imports of asparagus was less than one metric ton in 2019 while, one metric ton of asparagus was imported each in 2020 and 2021. Exports of asparagus was at less than one metric ton in 2021.

Total net food disposable averaged 998 metric tons from 2019 to 2021. It was highest in 2019 at 1.22 thousand metric tons and lowest in 2021 at 799 metric tons. Per capita net food disposable was constant at 0.01 kilogram during the reference years.

Volume of production of bell pepper for the reference years exhibited an increasing trend from 2019 to 2021. The level of production ranged from 13.95 thousand metric tons to 15.96 thousand metric tons. Average annual increase of 7.0 percent was noted during the three-year period.

There were no foreign transactions recorded for bell pepper from 2019 to 2021.

In terms of volume of bell pepper available for consumption, it averaged at 14.20 thousand metric tons. It went up from 13.26 thousand metric tons in 2019 to 14.18 thousand metric tons in 2020. It further increased to 15.16 thousand metric tons in 2021. Average per capita net disposable was 0.13 kilogram per year during the reference years.

Over the period 2019 to 2021, volume of production of black pepper contracted by an average of -7.7 percent. It was 1.13 thousand metric tons in 2019 and decreased to 1.03 thousand metric tons in 2020. Further reduction was noted in 2021 at 965 metric tons. Average production was registered at 1.04 thousand metric tons during the period.

Black pepper imports increased from 5.52 thousand metric tons in 2019 to 7.28 thousand metric tons in 2021. Meanwhile, exports were recorded at 51 metric tons in 2019, 22 metric tons in 2020, and 66 metric tons in 2021.

Total net food disposable continued to increase during the reference period at an average of 11.3 percent or 7.05 thousand metric tons. From 6.27 thousand metric tons in 2019, it went up to 7.11 thousand metric tons in 2020. Further increment was noted in 2021 at 7.77 thousand metric tons. The estimated per capita net food disposable was 0.06 kilogram in 2019 and 0.07 kilogram per year in 2020 and 2021.

Production of broccoli posted an average increment of 3.9 percent during the three-year period. In 2019, production was 3.25 thousand metric tons and expanded to 3.34 thousand metric tons in 2020. Continued improvement in production was noted in 2021 at 3.51 thousand metric tons. Annual average of production was estimated at 3.36 thousand metric tons.

Highest imports of broccoli were recorded in 2019 at 347 metric tons while the lowest was in 2020 at 124 metric tons. Imports settled at 202 metric tons in 2021. Exports were recorded at less than one metric ton each in 2019 and 2020.

The quantity of broccoli available for food consumption averaged 3.30 thousand metric tons from 2019 to 2021. The highest net food disposable was recorded at 3.41 thousand metric tons in 2021 and its lowest was recorded at 3.19 thousand metric tons in 2020. On per capita basis, net food disposable was 0.03 kilogram throughout the reference period.

During the three-year period, production of cabbage decreased by an average of -1.4 percent. The highest production was noted in 2020 at 129.80 thousand metric tons and lowest in 2021 at 124.49 thousand metric tons. The three-year average production of cabbage was at 127.45 thousand metric tons.

The volume of imported cabbage was reported in 2021 at 63 metric tons. There were no recorded exports of cabbage during the reference years.

Total net food disposable for cabbage averaged 117.24 thousand metric tons during the three-year period. It increased from 117.78 thousand metric tons in 2019 to 119.39 thousand metric tons in 2020. Then, in 2021 it decreased to 114.56 thousand metric tons. In per capita terms, net food disposable averaged 1.08 kilograms per year during the period.

From 2019 to 2021, carrot production fluctuated and recorded an average of -0.8 percent drop. It was registered at 65.07 thousand metric tons in 2019, 63.53 thousand metric tons in 2020, and 64.04 thousand metric tons in 2021. The average production was recorded at 64.21 thousand metric tons during the period.

Imports of carrot was 158 metric tons in 2019. It dropped to less than one metric ton each in 2020 and 2021. For carrot exports, there were no records from 2019 to 2021.

Over the three-year period, net food disposable for carrot averaged 59.12 thousand metric tons. From 60.01 thousand metric tons in 2019, it decreased to 58.45 thousand metric tons in 2020, and in 2021 it made a turnaround and increased to 58.91 thousand metric tons. Per capita net food disposable averaged at 0.54 kilogram per year.

Cauliflower production registered an average contraction of -0.4 percent during the reference period. It was highest at 11.98 thousand metric tons in 2020 and lowest at 11.45 thousand metric tons in 2021. Average production was 11.66 thousand metric tons over the three-year period.

Imports of cauliflower were highest in 2019 at 57 metric tons and lowest in 2020 at nine metric tons. The 2021 imports were registered at 16 metric tons. Meanwhile, exports were only recorded in 2020 at less than one metric ton.

During the reference period, total net food disposable averaged 10.75 thousand metric tons. From 10.68 thousand metric tons in 2019, it increased to 11.03 thousand metric tons in 2020 and in 2021, it went down to 10.54 thousand metric tons. Per capita net food disposable was 0.10 kilogram per year during the three-year period.

During the three-year period, chayote production increased by an annual average of 10.7 percent. It was 76.92 thousand metric tons in 2019 and was up to 87.16 thousand metric tons in 2020. Then, further improved to 94.19 thousand metric tons in 2021. An average of 86.09 thousand metric tons of chayote was produced during the period.

There were no imports recorded during the period. On the other hand, exports of chayote were reported at less than one metric ton in 2021.

The quantity of chayote available for consumption averaged 79.18 thousand metric tons during the three-year period. It was highest in 2021 at 86.63 thousand metric tons and lowest in 2019 at 70.75 thousand metric tons. Per capita net food disposable was between 0.66 kilogram in 2019 to 0.79 kilogram in 2021.

Domestic production of cucumber averaged 13.73 thousand metric tons from 2019 to 2021. From 13.63 thousand metric tons in 2019, it decreased to 13.54 thousand metric tons in 2020 while in 2021, it went up to 14.02 thousand metric tons.

In 2019, less than one metric ton each were recorded for the quantity of imported and exported cucumber. There were no reported imports and exports in 2020 and 2021.

Total net food available for cucumber averaged 12.63 thousand metric tons which corresponded to 1.5 percent increment from 2019 to 2021. It was highest in 2021 at 12.89 thousand metric tons and lowest at 12.45 thousand metric tons in 2020. In per capita terms, net food disposable was 0.12 kilogram in 2019 and 2021.

Eggplant production of the country posted an average reduction of -1.2 percent during the three-year period. It was 249.89 thousand metric tons in 2019, it decreased to 242.73 thousand metric tons in 2020 and went up to 244.04 thousand metric tons in 2021. The three-year production of eggplant averaged at 245.55 thousand metric tons.

Eggplant was not imported from 2019 to 2021. For exports, two metric tons of eggplant were recorded in 2021. It was less than one metric ton each in 2019 and 2020.

On the average, total net food disposable of eggplant was estimated at 225.86 thousand metric tons. It was recorded at 229.85 thousand metric tons in 2019, it went down to 223.27 thousand metric tons in 2020 and slightly recovered in 2021 at 224.46 thousand metric tons. Per capita net food disposable for eggplant posted an annual average of 2.08 kilograms from 2019 to 2021.

Local production of garlic declined by an average of -9.9 percent from 2019 to 2021. It was recorded highest at 7.26 thousand metric tons in 2019 and lowest at 5.89 thousand metric tons in 2021. The average production for the three-year period was 6.64 thousand metric tons.

Garlic imports increased from 85.12 thousand metric tons in 2019 to 88.51 thousand metric tons in 2020. It further expanded to 93.42 thousand metric tons in 2021. For exports of garlic, the highest was recorded in 2019 at 104 metric tons while the lowest was in 2020 at six metric tons. Exports settled at 29 metric tons in 2021.

During the reference years, quantity of garlic available for consumption posted an average of 87.16 thousand metric tons. From 84.02 thousand metric tons in 2019 it reached to 90.64 thousand metric tons in 2021. In per capita terms, net food disposable averaged 0.80 kilogram per year.

Production of ginger went up by an average of 2.2 percent during the reference years. It continued to improve from 26.93 thousand metric tons in 2019 to 27.13 thousand metric tons in 2020 and further grew to 28.14 thousand metric tons in 2021. Ginger production posted an average of 27.40 thousand metric tons from 2019 to 2021.

Imports of ginger fluctuated during the period. From 8.95 thousand metric tons in 2019, it increased to 12.24 thousand metric tons in 2020 and dropped to 10.39 thousand metric tons in 2021. Meanwhile, ginger exports were noted in 2019 at one metric ton and in 2021 at less than one metric ton.

The quantity of ginger available for consumption during the three-year period averaged to 34.75 thousand metric tons. From 32.87 thousand metric tons in 2019, it rose to 36.08 thousand metric tons in 2020 and went down to 35.31 thousand metric tons in 2021. On a per capita basis, it posted an average of 0.32 kilogram per year.

From 2019 to 2021, gourd posted a downtrend in production with an average decline of -2.5 percent. It was recorded at 76.65 thousand metric tons in 2019, 73.08 thousand metric tons in 2020, and 72.86 thousand metric tons in 2021. Gourd production averaged 74.19 thousand metric tons during the period.

There were no foreign trade transactions for gourd during the reference years.

Total net food disposable for gourd averaged 68.24 thousand metric tons during the period. The highest was recorded in 2019 at 70.49 thousand metric tons and lowest in 2021 at 67.01 thousand metric tons. The per capita net food disposable averaged 0.63 kilogram per year.

Over the three-year period, habitchuelas production went up by an average of 0.7 percent. It was recorded at 14.03 thousand metric tons in 2019, down to 13.42 thousand metric tons in 2020 and increased to 14.18 thousand metric tons in 2021. The average habitchuelas production was at 13.88 thousand metric tons during the period.

No foreign trade transactions were reported for habitchuelas from 2019 to 2021.

Total net food disposable for habitchuelas posted an annual average increment of 0.7 percent for the three-year period. In 2021, it was reported highest at 13.03 thousand metric tons and lowest at 12.33 thousand metric tons in 2020. The average per capita net food disposable was estimated at 0.12 kilogram during the reference years.

Mongo production contracted by an average of -1.0 percent during the three-year period. The highest production was in 2020 at 37.04 thousand metric tons while the lowest was in 2021 at 35.48 thousand metric tons. It posted an average of 36.26 thousand metric tons during the reference years.

Imports of mongo ranged from 36.65 thousand metric tons in 2019 to 49.26 thousand metric tons in 2021. Exports of mongo were at 385 metric tons in 2019, 97 metric tons in 2020, and 22 metric tons in 2021.

The estimated average total net food disposable for mongo was at 77.81 thousand metric tons during the three-year period. From 71.96 thousand metric tons in 2019 it expanded to 84.11 thousand metric tons in 2021. The per capita net food disposable was estimated between 0.67 kilogram in 2019 to 0.76 kilogram in 2021.

Okra production grew by an average of 1.1 percent from 2019 to 2021. From 31.71 thousand metric tons in 2019, it expanded to 32.63 thousand metric tons in 2020. However, it decreased to 32.42 thousand metric tons in 2021. During the period, okra was produced at an average of 32.25 thousand metric tons.

There was no record of okra imports during the period. Meanwhile, exports were recorded at 3.73 thousand metric tons in 2021 from 6.76 thousand metric tons in 2019.

The average total net food disposable for okra during the reference period was 24.90 thousand metric tons. It was highest at 26.39 thousand metric tons in 2021 and lowest at 22.95 thousand metric tons in 2019. Per capita net food disposable averaged 0.23 kilogram during the three-year period.

On the average, local production of onion declined by -0.8 percent during the reference years. In 2021, it was recorded lowest at 218.05 thousand metric tons and highest at 229.54 thousand metric tons in 2020. Production averaged 223.22 thousand metric tons during the three-year period.

Imports of onion averaged 70.93 thousand metric tons from 2019 to 2021. The highest record for imports was in 2021 at 101.68 thousand metric tons while the lowest was in 2019 at 23.59 thousand metric tons. On the other hand, onion exports were 379 metric tons in 2019, 163 metric tons in 2020, and 81 metric tons in 2021.

The quantity of onion available for consumption for the period of 2019 to 2021 averaged 267.77 thousand metric tons. From 223.08 thousand metric tons in 2019, it increased to 288.85 thousand metric tons in 2020, and further improved to 291.39 thousand metric tons in 2021. The per capita net food disposable for onion was computed at 2.08 kilograms in 2019, 2.66 kilograms in 2020, and 2.64 kilograms in 2021.

The production of patola increased at an average of 1.2 percent during the reference period. It went up from 12.87 thousand metric tons in 2019 to 13.18 thousand metric tons in 2021. Patola production averaged 13.01 thousand metric tons from 2019 to 2021.

No record of importation and exportation were noted during the reference period.

During the three-year period, the total net food disposable averaged 11.97 thousand metric tons. From 11.84 thousand metric tons in 2019, it increased to 11.94 thousand metric tons in 2020, and settled at 12.12 thousand metric tons in 2021. On per capita terms, net food disposable remained at 0.11 kilogram during the period.

The country's production of peanut posted an average increment of 2.2 percent during the reference period. It went up from 29.30 thousand metric tons in 2019 to 29.39 thousand metric tons in 2020. This further grew to 30.57 thousand metric tons in 2021. During the three-year period, peanut production averaged at 29.75 thousand metric tons.

Imports of peanut in 2019 at 87.87 thousand metric tons decreased to 68.41 thousand metric tons in 2020. It made a turnaround in 2021 and rose to 76.68 thousand metric tons. For exports, highest record was in 2020 at four metric tons while the lowest was less than one metric ton in 2019. In 2021, it was reported at one metric ton.

Total net food disposable for peanut averaged 99.25 thousand metric tons during the three-year period. It was 108.29 thousand metric tons in 2019 and went down to 90.36 thousand metric tons in 2020. However, it recovered to 99.11 thousand metric tons in 2021. In per capita terms, net food disposable averaged 0.91 kilogram per year.

From 2019 to 2021, an average increase of 0.9 percent was noted in the production of pechay. From 47.30 thousand metric tons in 2019, it went up to 47.50 thousand metric tons in 2020 and increased further to 48.12 thousand metric tons in 2021. The average production of pechay was 47.64 thousand metric tons during the period.

No foreign trade transactions were recorded for pechay during the three-year period.

The total net food disposable for pechay registered an average of 43.83 thousand metric during the reference period. It was highest in 2021 at 44.27 thousand metric tons and lowest in 2019 at 43.52 thousand metric tons. The average per capita net food disposable was 0.40 kilogram per year.

Over the period 2019 to 2021, squash production posted an average of 0.1 percent growth. From 194.77 thousand metric tons in 2019, it dropped to 193.81 thousand metric tons in 2020 but recovered to 195.08 thousand metric tons in 2021. It averaged 194.56 metric tons during the period.

There were no recorded imports and exports of squash from 2019 to 2021.

The average total net food disposable for squash was 178.98 thousand metric tons during the reference period. In 2019, the total net food disposable was 179.18 thousand metric tons, and decreased to 178.30 thousand metric tons in 2020. It increased to 179.46 thousand metric tons in 2021. The per capita net food disposable averaged 1.65 kilograms during the three-year period.

Tomato production inched up by an average of 0.5 percent during the reference period. It was highest in 2021 at 225.45 thousand metric tons and lowest in 2020 at 222.00 thousand metric tons. The annual average of tomato production was 223.58 thousand metric tons.

Less than one metric ton of tomato was imported in 2019. No exports were recorded during the three-year period.

During the reference years, the quantity of tomato available for consumption recorded an average of 174.33 thousand metric tons and it corresponded to an annual increment of 0.5 percent. In per capita terms, net food disposable averaged 1.60 kilograms per year from 2019 to 2021.

From 2019 to 2021, cashew nut production grew by an average of 2.8 percent. It was 24.23 thousand metric tons in 2019 and increased to 25.59 thousand metric tons each in 2020 and 2021. Cashew nut production averaged 25.14 thousand metric tons during the period.

Importation of cashew nut during the three-year period was less than one metric ton. Exports of cashew nut declined by an average of -19.3 percent during the period. In 2019, exports were 339 metric tons and went down to 203 metric tons in 2021. Exports of cashew nut averaged 298 metric tons during the reference period.

Total net food disposable for cashew nut averaged 24.54 thousand metric tons. It was estimated at 23.60 thousand metric tons in 2019 and rose to 24.93 thousand metric tons in 2020. It further increased to 25.08 thousand metric tons in 2021. The computed per capita net food disposable was 0.22 kilogram in 2019 and 0.23 kilogram per year in 2020 and 2021. The average annual per capita net food disposable was estimated at 0.23 kilogram.

Domestic production of pili nut declined by an average of -9.5 percent from 2019 to 2021. From 7.16 thousand metric tons in 2019, it decreased to 5.86 thousand metric tons in 2021. During the reference period, average production was estimated at 6.45 thousand metric tons.

From 2019 to 2021, no importation of pili nut was recorded. For exports, 60 metric tons in 2019 and 55 metric tons in 2020 were recorded. In 2021, the volume of pili nut exports settled at 23 metric tons.

On the average, total net food disposable was 6.35 thousand metric tons during the reference years. It was 7.04 thousand metric tons in 2019 and declined to 5.78 thousand metric tons in 2021. On a per capita basis, net food disposable averaged 0.06 kilogram per year.

Over the three-year period, atis production continued to decline at an average of -2.6 percent. From 2.21 thousand metric tons in 2019, it went down to 2.15 thousand metric tons in 2020 and 2.09 thousand metric tons in 2021. Average production of atis was estimated at 2.15 thousand metric tons during the period.

There were no record of imports and exports of atis during the three-year period.

Total net food disposable for atis averaged 2.02 thousand metric tons from 2019 to 2021. It was 2.07 thousand metric tons in 2019 and 2.02 thousand metric tons in 2020 and was lower at 1.97 thousand metric tons in 2021. The average per capita net food disposable was 0.02 kilogram per year.

Production of avocado averaged 19.84 thousand metric tons or exhibited a 0.7 percent growth during the three-year period. In 2019, it was recorded at 19.60 thousand metric tons, and it increased to 20.06 thousand metric tons in 2020. Avocado production decreased to 19.88 thousand metric tons in 2021.

Imports of avocado were recorded at 36 metric tons each in 2019 and 2020. It was reduced to 34 metric tons in 2021. For exports, the highest volume was registered in 2020 at 1.38 thousand metric tons and lowest in 2021 at 526 metric tons.

Total volume of avocado available for consumption averaged 17.79 thousand metric tons during the reference years. It was highest in 2021 at 18.22 thousand metric tons and lowest in 2019 at 17.57 thousand metric tons. Annual per capita net food disposable averaged 0.16 kilogram.

Production of banana in the country posted an average decline of -0.4 percent. From the 9.16 million metric tons in 2019, it decreased to 9.06 million metric tons in 2020. Increment in production was recorded in 2021 at 9.09 million metric tons. During the three-year period, banana production averaged 9.10 million metric tons.

A total of 22 metric tons of banana were imported in 2020, and it was down to less than one metric ton in 2021. On the other hand, the volume of banana exports averaged 3.55 million metric tons or a reduction of -24.8 percent during the period. From 4.40 million metric tons in 2019, volume of banana exports went down to 3.81 million metric tons in 2020 and further went down to 2.43 million metric tons in 2021.

Total net food disposable for banana was computed at an average of 3.83 million metric tons during the reference years. It expanded from 3.28 million metric tons in 2019 to 3.62 million metric tons in 2020. It continued to increase at 4.59 million metric tons in 2021. On a per capita basis, net food disposable was highest in 2021 at 41.69 kilograms and lowest in 2019 at 30.58 kilograms. Annual net food disposable averaged 35.19 kilograms per year.

From 2019 to 2021, production of caimito or star apple was declining by an average of -4.6 percent. From 12.08 thousand metric tons in 2019, production contracted to 11.44 thousand metric tons in 2020. It further went down to 11.00 thousand metric tons in 2021. On the average, production of caimito was 11.50 thousand metric tons.

No foreign trade transactions for caimito were reported during the reference period.

Total net food disposable for caimito averaged 10.81 thousand metric tons during the period. It exhibited a continuous reduction from 11.36 thousand metric tons in 2019 to 10.34 thousand metric tons in 2021. The average per capita net food disposable was 0.10 kilogram.

Domestic production of calamansi recorded an average reduction of -5.3 percent during the three-year period. From 125.97 thousand metric tons in 2019, production dropped to 108.69 thousand metric tons in 2020. In 2021, it increased to 112.13 thousand metric tons. On the average, calamansi production was 115.59 thousand metric tons.

There was no reported importation of calamansi during the three-year period. The volume of exports of calamansi averaged 66 metric tons. It declined from 100 metric tons in 2019 to 56 metric tons in 2020, and further reduced to 43 metric tons in 2021.

The total volume of calamansi available for consumption averaged 108.60 thousand metric tons during the reference years. The highest was noted in 2019 at 118.32 thousand metric tons and lowest in 2020 at 102.11 thousand metric tons. It reached 105.36 thousand metric tons in 2021. The average per capita net food disposable figured to 1.00 kilogram during the period.

Durian production decreased by an average of -3.4 percent during the reference period. It went down from 79.28 thousand metric tons in 2019 to 73.87 thousand metric tons in 2021. Production averaged 77.32 thousand metric tons during the three-year period.

There were no imports of durian from 2019 to 2021. Exportation was highest in 2019 at 2.37 thousand metric tons and lowest in 2021 at 440 metric tons. The average annual export was registered at 1.19 thousand metric tons.

The quantity of durian available for food averaged 71.56 thousand metric tons during the three-year period. In 2019, it was 72.30 thousand metric tons and expanded to 73.37 thousand metric tons in 2020. However, it dropped to 69.02 thousand metric tons in 2021. Per capita net food disposable was estimated at 0.67 kilogram each in 2019 and 2020. In 2021, it was computed at 0.63 kilogram. It averaged 0.66 kilogram during the period.

An average of -0.5 percent drop was registered in guyabano production during the three-year period. From 7.75 thousand metric tons in 2019, it decreased to 7.51 thousand metric tons in 2020. In 2021, production increased to 7.66 thousand metric tons. Production recorded an average of 7.64 thousand metric tons during the period.

No imports of guyabano were recorded during the reference period, while exports was registered at less than one metric ton in 2021.

On the average, total net food disposable for guyabano was recorded at 7.18 thousand metric tons for the three-year period. The highest total net food available for guyabano was reported in 2019 at 7.28 thousand metric tons and lowest in 2020 at 7.06 thousand metric tons. In 2021, per capita net food disposable settled at 7.20 thousand metric tons. It averaged 0.07 kilogram during the reference years.

Local production of jackfruit decreased by an average of -1.9 percent during the three-year period. It was highest at 40.93 thousand metric tons in 2019 and lowest at 39.39 thousand metric tons in 2021. During the reference years, production averaged 40.17 thousand metric tons.

Imports of jackfruit were 12 metric tons in 2019 and 24 metric tons each in 2020 and 2021. Meanwhile, bulk of the exports was noted at 156 metric tons in 2021. Exports were reported at 50 metric tons in 2019 and 54 metric tons in 2020.

The average net food disposable during the three-year period was 37.70 thousand metric tons. It exhibited a downtrend from 38.44 thousand metric tons in 2019 to 36.90 thousand metric tons in 2021. Annual per capita net food disposable declined from 0.36 kilogram in 2019 to 0.33 kilogram in 2021. It averaged 0.35 kilogram during the period.

A downtrend in lanzones production was posted at an average of -30.3 percent reduction from 2019 to 2021. In 2019, it was 19.97 thousand metric tons and down to 16.04 thousand metric tons in 2020. Production continued to decline at 9.48 thousand metric tons in 2021. Lanzones was produced at an average of 15.16 thousand metric tons during the period.

There was no importation of lanzones during the period. Meanwhile, exports were reported at four metric tons in 2019, seven metric tons in 2020, and one metric ton in 2021.

The total volume of lanzones available for consumption averaged 14.25 thousand metric tons during the reference years. The highest was in 2019 at 18.77 thousand metric tons and the lowest was in 2021 at 8.91 thousand metric tons. The average per capita net food disposable was computed at 0.13 kilogram during the reference period.

On the average, domestic production of mandarin dropped by an average of -3.9 percent during the three-year period. It decreased from 11.57 thousand metric tons in 2019 to 10.97 thousand metric tons in 2020 and down again to 10.67 thousand metric tons in 2021. The average production of mandarin for the three-year period was 11.07 thousand metric tons.

The volume of mandarin imports was 129.75 thousand metric tons during the three-year period. The highest quantity of imports was recorded in 2021 at 155.88 thousand metric tons and lowest in 2019 at 99.06 thousand metric tons. On the other hand, exports of mandarin during the three-year period were less than one metric ton.

Total net food disposable for mandarin averaged 132.37 thousand metric tons from 2019 to 2021. It registered an average increase of 23.0 percent, from 103.99 thousand metric tons in 2019 to 156.55 thousand metric tons in 2021. The per capita net food disposable was highest in 2021 at 1.42 kilograms and lowest in 2019 at 0.97 kilogram. It averaged 1.22 kilograms during the reference period.

Local production of mango inched up by an average of 0.3 percent from 2019 to 2021. The bulk of mango production was registered in 2021 at 741.70 thousand metric tons while least was in 2019 at 737.94 thousand metric tons. It averaged 739.63 thousand metric tons

Imports of mango was recorded in 2021 at 30.0 metric tons. Meanwhile, exports averaged 11.65 thousand metric tons during the three-year period. From 14.21 thousand metric tons in 2019, exports decreased to 10.66 thousand metric tons in 2020 then to 10.08 thousand metric tons in 2021.

Total net food disposable during the reference period averaged 684.31 thousand metric tons. It was highest in 2021 at 687.75 thousand metric tons and lowest in 2019 at 680.30 thousand metric tons. The per capita net food disposable was estimated at 6.34 kilograms in 2019, 6.30 kilograms in 2020, and 6.24 kilograms in 2021. Average per capita net food disposable was 6.29 kilograms per year.

From 2019 to 2021, production of mangosteen declined by an average of -41.3 percent. It was highest at 5.60 thousand metric tons in 2019 and lowest at 1.83 thousand metric tons in 2021. Average production was 3.82 thousand metric tons during the reference years.

There was no record of importation of mangosteen during the period. On the other hand, the highest export volume was registered in 2021 at 26 metric tons. For 2019 and 2020, exports were at 14 metric tons and three metric tons, respectively.

On the average, the total quantity of mangosteen available for consumption was estimated at 3.58 thousand metric tons. The highest was in 2019 at 5.25 thousand metric tons and lowest in 2021 at 1.70 thousand metric tons. Per capita net food disposable ranged from 0.02 kilogram in 2021 to 0.05 kilogram in 2019.

During the three-year period, the domestic production of marang declined by an average of -17.0 percent. From 14.06 thousand metric tons in 2019 to 12.10 thousand metric tons in 2020. It further dropped to 9.68 thousand metric tons in 2021. Production averaged 11.94 thousand metric tons during the reference period.

No foreign trade transactions were recorded for marang from 2019 to 2021.

Total net food disposable was estimated at an average of 11.23 thousand metric tons per year during the reference period. It was highest in 2019 at 13.21 thousand metric tons and lowest in 2021 at 9.09 thousand metric tons. Per capita net food disposable declined from 0.12 kilogram in 2019 to 0.08 kilogram in 2021.

Production of papaya dropped by an average of -0.1 percent during the reference period. In 2019, it was 166.16 thousand metric tons and went down to 163.30 thousand metric tons in 2020. Production increased to 165.91 thousand metric tons in 2021. On the average, production was 165.13 thousand metric tons for the three-year period.

During the reference years, no imports of papaya were reported. Meanwhile, exportation of papaya increased from 5.63 thousand metric tons in 2019 to 6.45 thousand metric tons in 2020. However, in 2021, exports of papaya went down to 6.14 thousand metric tons.

Total net food disposable averaged 149.51 thousand metric tons during the three-year period. It was lowest in 2020 at 147.44 thousand metric tons and highest in 2021 at 150.19 thousand metric tons. In per capita terms, net food disposable from 2019 to 2021 averaged 1.37 kilograms.

From 2019 to 2021, the country's production of pineapple registered an average increment of 2.1 percent. From 2.75 million metric tons in 2019, it increased to 2.86 million metric tons in 2021. Pineapple production averaged 2.77 million metric tons during the period.

There were no recorded imports of pineapple during the reference period. Meanwhile, exports were 631.49 thousand metric tons in 2019 and dropped to 594.73 thousand metric tons in 2020. It was further reduced to 546.11 thousand metric tons in 2021. Exports of pineapple averaged 590.77 thousand metric tons during the reference period.

The volume of pineapple available for consumption was computed at an average of 1.09 million metric tons. In 2021, the total net food available was highest at 1.16 million metric tons and lowest in 2020 at 1.05 million metric tons. In per capita terms, net food disposable averaged 10.02 kilograms annually from 2019 to 2021.

The volume of locally produced strawberry posted an average growth of 28.6 percent during the reference period. From 1.10 thousand metric tons in 2019, it increased to 1.20 thousand metric tons in 2020. Production rose to 1.78 thousand metric tons in 2021. On the average, production was estimated at 1.36 thousand metric tons per year.

From 19 metric tons in 2019, strawberry imports went up to 26 metric tons in 2020 and further increased to 347 metric tons in 2021. On the other hand, strawberry was not exported during the reference years.

Net food disposable for strawberry averaged 1.40 thousand metric tons during the reference years. It was highest in 2021 at 2.00 thousand metric tons and lowest in 2019 at 1.05 thousand metric tons. On a per capita basis, net food disposable was at 0.01 kilogram each in 2019 and 2020. In 2021, it was computed at 0.02 kilogram. The average for the three-year period was at 0.01 kilogram.

Production of tiesa decreased by an average of -7.7 percent from 2019 to 2021. It was highest at 788 metric tons in 2019 and lowest at 671 metric tons in 2021. During the three-year period, tiesa was produced at an average of 727 metric tons.

There were no recorded imports and exports of tiesa during the reference years.

From 2019 to 2021, total net food disposable of tiesa averaged 683 metric tons. It was 741 metric tons in 2019 and was reduced to 630 metric tons in 2021. Per capita net food disposable was constant at 0.01 kilogram during the reference years.

Over the three-year period, production of watermelon registered an average decline of -2.5 percent. It increased from 143.48 thousand metric tons in 2019 to 148.46 thousand metric tons in 2020. However, in 2021, watermelon production went down to 135.85 thousand metric tons. On the average, production was at 142.60 thousand metric tons.

Watermelon was not imported during the reference period. Exports of watermelon were recorded at five metric tons in 2019 and less than one metric ton in 2020. There was no exportation of watermelon in 2021.

During the reference years, the quantity of watermelon available for food averaged 134.04 thousand metric tons. It was highest in 2020 at 139.55 thousand metric tons and lowest in 2021 at 127.70 thousand metric tons. The per capita net food disposable was estimated at 1.26 kilograms in 2019, 1.28 kilograms in 2020, and 1.16 kilograms in 2021.

Cacao production exhibited an increasing trend at an average of 8.5 percent during the reference period. From 8.49 thousand metric tons in 2019, it increased to 9.34 thousand metric tons in 2020, and further grew to 10.00 thousand metric tons in 2021. It averaged 9.28 thousand metric tons.

Imports of cacao was highest in 2020 at 2.02 thousand metric tons and lowest in 2019 at 1.12 thousand metric tons. In 2021, it was recorded at 1.77 thousand metric tons. Meanwhile, exports increased from 3.05 thousand metric tons in 2019 to 5.15 thousand metric tons in 2020. Lower exports were recorded in 2021 at 4.41 thousand metric tons. It averaged 4.20 thousand metric tons during the reference years.

Total net food disposable of cacao averaged 6.64 thousand metric tons. During the three-year period net food disposable was recorded highest in 2021 at 7.29 thousand metric tons and lowest in 2020 at 6.14 thousand metric tons. On a per capita basis, net food disposable ranged from 0.06 kilogram in 2019 and 2020 to 0.07 kilogram in 2021.

From 2019 to 2021, local production of coconut decreased by an average of -0.1 percent. Highest production was registered in 2019 at 14.77 million metric tons while the lowest was in 2020 at 14.49 million metric tons. Production settled at 14.72 million metric tons in 2021. It averaged 14.66 million metric tons during the period.

Coconut imports were recorded at less than one metric ton in 2020 and 2021. On the other hand, exportation of coconut was highest in 2019 at 1.38 thousand metric tons while lowest in 2020 at 225 metric tons. About 584 metric tons of coconut were exported in 2021. Exports averaged 730 metric tons during the three-year period.

Total net food disposable for coconut averaged 732.84 thousand metric tons during the reference years. Coconut available for food was 738.17 thousand metric tons in 2019, 724.53 thousand metric tons in 2020, and 735.83 thousand metric tons in 2021. Per capita net food disposable was highest at 6.88 kilograms in 2019 and lowest at 6.66 kilograms in 2020. It was computed at 6.68 kilograms in 2021.

The country's production of coffee grew by an average of 0.5 percent during the three-year period. It increased from 30.02 thousand metric tons in 2019 to 30.32 thousand metric tons in 2020 and dropped to 30.30 thousand metric tons in 2021. During the reference years, production averaged 30.22 thousand metric tons.

Coffee imports were reported at 35.09 thousand metric tons in 2019, 46.28 thousand metric tons in 2020, and 37.97 thousand metric tons in 2021. It averaged 39.78 thousand metric tons during the reference years. Meanwhile, coffee exports increased from 14 metric tons in 2019 to 23 metric tons in 2021.

On the average, total net food disposable was 49.68 thousand metric tons. The highest was recorded at 54.37 thousand metric tons in 2020 and lowest at 46.22 thousand metric tons in 2019. In 2021, it was estimated at 48.45 thousand metric tons. Per capita net food disposable averaged 0.46 kilogram during the reference years.

Domestic production of sugarcane increased by an average of 12.7 percent during the reference period. From 20.72 million metric tons in 2019, it expanded to 24.40 million metric tons in 2020 and further grew to 26.28 million metric tons in 2021. On the average, 23.80 million metric tons of sugarcane was produced during the reference years.

For 2019 to 2021, no sugarcane imports were recorded. On the other hand, exports in 2019 and 2020 were two metric tons and four metric tons, respectively. Less than one metric ton of sugarcane was exported in 2021.

The total net food disposable averaged 237.98 thousand metric tons during the period. It was recorded highest in 2021 at 262.77 thousand metric tons and lowest in 2019 at 207.19 thousand metric tons. In per capita terms, net food disposable increased from 1.93 kilograms in 2019 to 2.38 kilograms in 2021.

Beef production from 2019 to 2021 decreased by an average of -4.5 percent. In 2019, it was recorded at 152.75 thousand metric tons and was down to 134.29 thousand metric tons in 2020. It settled at 138.38 thousand metric tons in 2021. The average production of beef was 141.81 thousand metric tons.

Importation of beef fluctuated during the reference period. From 103.13 thousand metric tons in 2019, it was reduced to 94.99 thousand metric tons in 2020. Beef imports reached 119.24 thousand metric tons in 2021. It averaged 105.79 thousand metric tons during the three-year period. Meanwhile, beef exports ranged from 27 metric tons in 2019 to 34 metric tons in 2020. It was exported at an average of 30 metric tons from 2019 to 2021.

The average quantity of beef carcass available for food was 203.71 thousand metric tons. It was highest in 2021 at 212.79 thousand metric tons and lowest in 2020 at 188.49 thousand metric tons. The average per capita net food disposable was 1.87 kilograms per year.

For beef offal, the computed total net food disposable averaged 29.68 thousand metric tons from 2019 to 2021. From 30.73 thousand metric tons in 2019, it was reduced to 27.33 thousand metric tons in 2020. In 2021, it increased to 30.97 thousand metric tons or equivalent to 0.28 kilogram per capita. On the average, the annual per capita net food disposable was estimated at 0.27 kilogram.

Domestic production of carabeef contracted from 2019 to 2021 at an annual average of -3.5 percent. From 82.44 thousand metric tons in 2019, it declined to 70.57 thousand metric tons in 2020. Carabeef production recovered to 75.81 thousand metric tons in 2021. Average production was 76.27 thousand metric tons during the three-year period.

During the reference years, carabeef imports registered an average of 35.63 thousand metric tons. The highest importation was recorded in 2021 at 43.21 thousand metric tons and lowest at 31.11 thousand metric tons in 2020. Carabeef exports were reported only in 2020 at 28 metric tons.

The volume of carabeef carcass available for consumption from 2019 to 2021 averaged 100.62 thousand metric tons. It was highest in 2021 at 107.81 thousand metric tons and lowest in 2020 at 91.23 thousand metric tons. The average per capita net food disposable was computed at 0.93 kilogram per year.

For carabeef offal, the average net food disposable was 11.19 thousand metric tons during the three-year period. In 2019, it was recorded at 12.10 thousand metric tons and was reduced to 10.36 thousand metric tons in 2020. In 2021, it increased to 11.13 thousand metric tons. The annual per capita net food disposable averaged 0.10 kilogram during the reference year.

Production of chevon fluctuated over the reference years and registered an average decrease of -2.1 percent. In 2019, it was recorded at 44.54 thousand metric tons and went down to 41.83 thousand metric tons in 2020. In 2021, chevon production increased to 42.60 thousand metric tons. The three-year average production was 42.99 thousand metric tons.

There were no recorded imports and exports of chevon from 2019 to 2021.

Total net food disposable for chevon carcass averaged 32.43 thousand metric tons. From 33.60 thousand metric tons in 2019, it decreased to 31.56 thousand metric tons in 2020. Net food disposable improved to 32.14 thousand metric tons in 2021. The annual per capita net food disposable averaged 0.30 kilogram.

In the case of chevon offal, the average net food disposable was 10.56 thousand metric tons. The total net food disposable for offal was highest in 2019 at 10.94 thousand metric tons and lowest in 2020 at 10.28 thousand metric tons. In 2021, it was registered at 10.47 thousand metric tons. On per capita basis, net food disposable averaged 0.10 kilogram during the reference years.

For the period 2019 to 2021, pork production decreased annually by an average of -13.8 percent. It exhibited a downtrend from 1.94 million metric tons in 2019 to 1.43 million metric tons in 2021. On the average, the volume of pork production was 1.72 million metric tons.

Importation of pork was highest in 2021 at 494.79 thousand metric tons and lowest in 2020 at 179.67 thousand metric tons. It averaged 320.32 thousand metric tons during the reference period. Meanwhile, exports were reported at 28 metric tons in 2020 and five metric tons in 2021.

The quantity of pork carcass available for consumption averaged 1.56 million metric tons during the reference years. It ranged from 1.44 million metric tons in 2021 to 1.68 million metric tons in 2019. In per capita terms, net food disposable was estimated at 15.67 kilograms in 2019, 14.30 kilograms in 2020, and 13.08 kilograms in 2021.

On the average, the total quantity of pork offal available for food averaged 464.75 thousand metric tons. From 518.35 thousand metric tons in 2019, it went down to 409.14 thousand metric tons in 2020. Meanwhile, in 2021 it expanded to 466.75 thousand metric tons. The per capita net food disposable averaged 4.28 kilograms per year.

During the three-year period, dressed chicken production decreased by an average of -4.8 percent. It went down from 1.48 million metric tons in 2019 to 1.34 million metric tons in 2021. The average production was estimated at 1.41 million metric tons during the reference years.

An average of 129.11 thousand metric tons of dressed chicken was imported from 2019 to 2021. From 114.74 thousand metric tons in 2019, it was reduced in 2020 at 106.49 thousand metric tons and increased to 166.09 thousand metric tons in 2021. Meanwhile, exports were reduced from 1.17 thousand metric tons in 2019 to 125 metric tons in 2021.

From 2019 to 2021, total net food disposable for dressed chicken averaged 1.54 million metric tons. It was 1.60 million metric tons in 2019 and went down to 1.50 million metric tons in 2020. In 2021, total net food disposable settled at 1.51 million metric tons. The derived per capita net food disposable was highest in 2019 at 14.89 kilograms and lowest in 2021 at 13.70 kilograms. On the average, it was estimated at 14.13 kilograms per year.

Production of dressed duck decreased by an average of -1.6 percent over the three-year period. It continuously went down from 22.58 thousand metric tons in 2019 to 21.88 thousand metric tons in 2021. On the average, duck production was 22.21 thousand metric tons.

Importation of dressed duck decreased from 147 metric tons in 2019 to five metric tons in 2021. Meanwhile, the volume of exported dressed duck was noted at 33 metric tons in 2019.

During the reference years, the total net food disposable for dressed duck averaged 22.27 thousand metric tons. It exhibited declines from 22.69 thousand metric tons in 2019 to 22.22 thousand metric tons in 2020, and further went down to 21.88 thousand metric tons in 2021. The annual per capita net food disposable was estimated at an average of 0.20 kilogram.

Over the period 2019 to 2021, chicken egg production recorded an uptrend at an average of 6.5 percent. From 583.23 thousand metric tons in 2019, it went up to 605.79 thousand metric tons in 2020 and settled to 661.39 thousand metric tons in 2021. The average production of chicken egg was 616.80 thousand metric tons.

There was no recorded importation during the period. Exports of chicken egg were noted only in 2021 at less than one metric ton.

Total net food disposable for chicken egg averaged 567.46 thousand metric tons during the reference period. It continued to increase from 536.58 thousand metric tons in 2019 to 608.48 thousand metric tons in 2021. On per capita basis, net food disposable for chicken egg was highest in 2021 at 5.52 kilograms and lowest at 5.00 kilograms in 2019. The annual per capita net food disposable averaged 5.22 kilograms during the period.

During the reference period, duck egg production registered an average increment of 0.9 percent. It was 49.57 thousand metric tons in 2019 and increased to 50.48 thousand metric tons in 2020. In 2021, it was recorded at 50.45 thousand metric tons. Annual production of duck egg averaged 50.17 thousand metric tons.

From 2019 to 2021, there was no recorded importation of duck egg. On the other hand, exports were reported at one metric ton each in 2019 and 2020. Duck egg exports reached two metric tons in 2021.

On the average, the total volume of duck egg for consumption was estimated at 47.16 thousand metric tons. The highest was noted in 2020 at 47.45 thousand metric tons and lowest in 2019 at 46.59 thousand metric tons. It was 47.42 thousand metric tons in 2021. On a per capita basis, it averaged 0.43 kilogram during the three-year period.

Milkfish production recorded an average increment of 3.7 percent over the three-year period. It posted a continued increase from 414.94 thousand metric tons in 2019 to 446.38 thousand metric tons in 2021. The three-year average production of milkfish was 427.43 thousand metric tons.

Importation of milkfish from 2019 to 2021 averaged 503 metric tons. It registered an uptrend, from 319 metric tons in 2019 to 539 metric tons in 2020, and 651 metric tons in 2021. Likewise, volume of exports of milkfish went up from 5.87 thousand metric tons in 2019 to 6.75 thousand metric tons in 2021. It averaged 6.18 thousand metric tons during the reference years.

From 2019 to 2021, the volume of milkfish available for consumption averaged 272.15 thousand metric tons. It increased from 264.16 thousand metric tons in 2019 to 268.24 thousand metric tons in 2020, and 284.05 thousand metric tons in 2021. On a per capita basis, the annual net food disposable averaged 2.50 kilograms during the three-year period.

Domestic production of roundscad contracted annually by an average of -1.6 percent during the reference period. It was highest at 202.00 thousand metric tons in 2020 and lowest at 181.52 thousand metric tons in 2021. The average production of roundscad was estimated at 190.84 thousand metric tons.

Imports of roundscad exhibited fluctuating trend throughout the reference years. From 53.07 thousand metric tons in 2019, it decreased to 24.05 thousand metric tons in 2020. In 2021, the imports volume expanded to 61.59 thousand metric tons. Meanwhile, exports of roundscad dropped from 59 metric tons to two metric tons in 2020. In 2021, it expanded to 708 metric tons. From 2019 to 2021, it recorded an average of 256 metric tons.

On the average, total net food disposable for roundscad was 170.03 thousand metric tons during the three-year period. It was highest in 2021 at 178.87 thousand metric tons. This was equivalent to 1.62 kilograms per person per year. On the other hand, the lowest was noted in 2020 at 155.35 thousand metric tons or 1.43 kilograms per year on a per capita basis. The annual per capita net food disposable averaged 1.56 kilograms.

Over the reference years, the country's production of tilapia grew by an average of 3.2 percent. From 321.19 thousand metric tons in 2019, it decreased to 304.33 thousand metric tons in 2020. Domestic production in 2021 improved to 340.07 thousand metric tons. The annual average production of tilapia figured 321.86 thousand metric tons.

Imports fluctuated during the reference period. The highest volume of tilapia imports was recorded in 2021 at 227 metric tons while it was lowest in 2020 at 14 metric tons. Imports averaged 101 metric tons over the three-year period. Exports of tilapia were only recorded in 2021 at 36 metric tons.

The average quantity of tilapia available for food was estimated at 312.30 thousand metric tons from 2019 to 2021. The total net food disposable was 311.61 thousand metric tons in 2019. It declined to 295.21 thousand metric tons in 2020 and went up to 330.06 thousand metric tons in 2021. The per capita net food disposable in 2021 was 3.00 kilograms. It averaged 2.87 kilograms per year during the three-year period.

The annual domestic production of tuna decreased at an average rate of -6.5 percent during the reference period. Production went down from 530.75 thousand metric tons in 2019 to 520.17 thousand metric tons in 2020. It declined further to 462.40 thousand metric tons in 2021. The average volume of tuna production was 504.44 thousand metric tons during the period.

The country's importation of tuna averaged 192.85 thousand metric tons from 2019 to 2021. It decreased from 193.14 thousand metric tons in 2019 to 177.60 thousand metric tons in 2020. The highest was noted in 2021 at 207.82 thousand metric tons. Meanwhile, the reported volume of exported tuna was 30.46 thousand metric tons in 2019 and reached the highest at 43.10 thousand metric tons in 2020. However, it dropped to 10.58 thousand metric tons in 2021. It averaged 28.05 thousand metric tons during the reference years.

On the average, total net food disposable for tuna was 492.69 thousand metric tons from 2019 to 2021. From 507.67 thousand metric tons in 2019 it went down to 472.60 thousand metric tons. In 2021, it increased to 497.80 thousand metric tons. On a per capita basis, it was estimated at 4.73 kilograms in 2019, 4.34 kilograms in 2020, and 4.52 kilograms in 2021.

The country's production of crab indicated an uptrend at an average of 6.4 percent from 2019 to 2021. From 51.96 thousand metric tons in 2019, it went up to 53.24 thousand metric tons in 2020 and further increased to 58.72 thousand metric tons in 2021. On the average, production was estimated at 54.64 thousand metric tons.

The quantity of crab imports continued to decrease from 49 metric tons in 2019 to five metric tons in 2021 with an average decline of -67.8 percent. On the other hand, exports fluctuated during the period. From 7.47 thousand metric tons in 2019, exportation of crab slowed down to 3.21 thousand metric tons in 2020. In 2021, exports went up to 5.29 thousand metric tons.

The volume of crab available for consumption averaged 48.52 thousand metric tons over the three-year period. It recorded an increase from 43.76 thousand metric tons in 2019 to 52.56 thousand metric tons in 2021. In per capita terms, the annual net food disposable was between 0.41 kilogram in 2019 to 0.48 kilogram in 2021.

Production of shrimps and prawns declined by an annual average of -1.1 percent during the three-year period. In 2019, highest production was recorded at 52.42 thousand metric tons while lowest in 2020 at 48.74 thousand metric tons. Production was 51.12 thousand metric tons in 2021. The average volume of production was 50.76 thousand metric tons per year.

In 2019, the volume of imported shrimps and prawns was 4.14 thousand metric tons. It was reduced to 1.79 thousand metric tons in 2020 but inched up to 1.97 thousand metric tons in 2021. Imports of shrimps and prawns averaged 2.63 thousand metric tons during the reference period. Meanwhile, exports of shrimps and prawns declined from 6.02 thousand metric tons in 2019 to 3.69 thousand metric tons in 2021.

For the period 2019 to 2021, the computed total net food disposable averaged 48.49 thousand metric tons. It was highest in 2019 at 49.75 thousand metric tons and lowest in 2020 at 47.10 thousand metric tons. In 2021, it settled at 48.63 thousand metric tons. The derived per capita net food disposable averaged 0.45 kilogram over the reference years.

The domestic production of mussel fluctuated from 2019 to 2021 with an average contraction of -0.5 percent. From 25.42 thousand metric tons in 2019, it decreased to 19.23 thousand metric tons in 2020. Production expanded to 23.71 thousand metric tons in 2021. Mussel production averaged 22.79 thousand metric tons during the reference period.

An average of 241 metric tons of mussel was imported from 2019 to 2021. From the largest imports of 421 metric tons in 2019, it went down to 157 metric tons in 2020, and further declined to 145 metric tons in 2021. Likewise, volume of mussel exports dropped from 172 metric tons in 2019 to 22 metric tons in 2021.

The volume of mussel available for food averaged 22.60 thousand metric tons. It was lowest in 2020 at 19.05 thousand metric tons and highest in 2019 at 25.29 thousand metric tons. It was 23.47 thousand metric tons in 2021 or equivalent to 0.21 kilogram in per capita terms.

The country's production of oyster exhibited an average increment of 11.3 percent during the reference years. From 38.02 thousand metric tons in 2019, production rose to 55.76 thousand metric tons in 2020 and was reduced to 42.29 thousand metric tons in 2021. On the average, production was 45.36 thousand metric tons during the period.

Imports of oyster were recorded at 25 metric tons in 2019. It increased to 40 metric tons in 2020 but dropped to 11 metric tons in 2021. Oyster imports averaged 26 metric tons during the reference years. Meanwhile, exportation of oyster decreased from 72 metric tons in 2019 to 48 metric tons in 2020, and further down to 31 metric tons in 2021.

Total net food disposable for oyster averaged 44.65 thousand metric tons during the three-year period. From 37.40 thousand metric tons in 2019, it expanded to 54.92 thousand metric tons in 2020. In 2021, it decreased to 41.64 thousand metric tons. It averaged 44.65 thousand metric tons during the reference period. The average per capita net food disposable was 0.41 kilogram per year.

R - Revised

Domestic production of abaca declined by an average of -6.9 percent from 2019 to 2021. It was highest at 72.21 thousand metric tons in 2019 and lowest at 62.40 thousand metric tons in 2021. Annual average of production of abaca was recorded at 68.52 thousand metric tons.

On the average, there were 6.47 thousand metric tons of imported abaca during the three-year period. From 5.57 thousand metric tons, it grew to 5.82 thousand metric tons and continued to increase at 8.02 thousand metric tons in 2021. Likewise, exports of abaca also exhibited an uptrend, from 11.80 thousand metric tons in 2019 to 15.24 thousand metric tons in 2021. Abaca exports averaged 13.62 thousand metric tons during the reference years.

Domestic use of abaca averaged 61.37 thousand metric tons. It decreased from 65.98 thousand metric tons in 2019 to 62.96 thousand metric tons in 2020. Further reduction to 55.19 thousand metric tons was recorded in 2021.

The quantity of cotton produced from 2019 to 2021 increased by an average of 22.1 percent. It was recorded at 23 metric tons in 2019, 41 metric tons in 2020, and 27 metric tons in 2021. Cotton production averaged 30 metric tons during the reference years.

Imports of cotton averaged 13.00 thousand metric tons during the three-year period. The highest was recorded in 2019 at 17.13 thousand metric tons while the lowest was in 2020 at 10.10 thousand metric tons. In 2021, it reached 11.76 thousand metric tons. Meanwhile, exports exhibited an increasing trend, from 604 metric tons in 2019 to 1.76 thousand metric tons in 2021. Exports averaged 991 metric tons during the reference years.

On the average, local use of cotton was registered at 12.04 thousand metric tons. The highest domestic use was in 2019 at 16.55 thousand metric tons and lowest in 2020 at 9.54 thousand metric tons. There were 10.03 thousand metric tons of cotton available for domestic use in 2021.

Production was converted to natural rubber

Source: Philippine Statistics Authority

During the three-year period, the country's production of rubber was reduced by an average of -0.1 percent. From 2019 production of 215.84 thousand metric tons, it decreased to 211.20 thousand metric tons in 2020. However, it slightly grew to 215.32 thousand metric tons in 2021. Rubber production averaged 214.12 thousand metric tons during the reference years.

Rubber imports recorded an average of 51.45 thousand metric tons during the period. In 2019, imports were at 56.14 thousand metric tons and went down to 39.73 thousand metric tons in 2020. Meanwhile, it recovered and rose to 58.47 thousand metric tons in 2021. In terms of rubber exports, from 124.27 thousand metric tons in 2019, it grew to 206.99 thousand metric tons in 2021. During the reference period, exports averaged 163.20 thousand metric tons.

The volume of rubber for domestic use averaged 102.37 thousand metric tons during the reference years. From 147.70 thousand metric tons in 2019, it went down to 92.60 thousand metric tons in 2020, and continued to decline at 66.80 thousand metric tons in 2021.

Production of tobacco from 2019 to 2021 contracted by an average of -0.1 percent. It was highest in 2020 at 52.44 thousand metric tons and lowest in 2021 at 50.93 thousand metric tons. During the period, average tobacco produced was 51.48 thousand metric tons.

On the average, tobacco was imported at 48.10 thousand metric tons during the three-year period. From 53.13 thousand metric tons of imports in 2019, it declined to 44.67 thousand metric tons in 2021. For exports, it averaged 38.09 thousand metric tons during the period. Exports for tobacco were registered at 40.43 thousand metric tons in 2019, 32.42 thousand metric tons in 2020, and 41.43 thousand metric tons in 2021.

During the reference years, the volume of tobacco for local use averaged 56.34 thousand metric tons. It was highest in 2020 at 61.28 thousand metric tons and lowest at 49.08 thousand metric tons in 2021.
