

SPECIAL RELEASE

Palay Situation Report in Laguna: First Quarter 2026 Preliminary Results

Date of Release: 19 May 2026

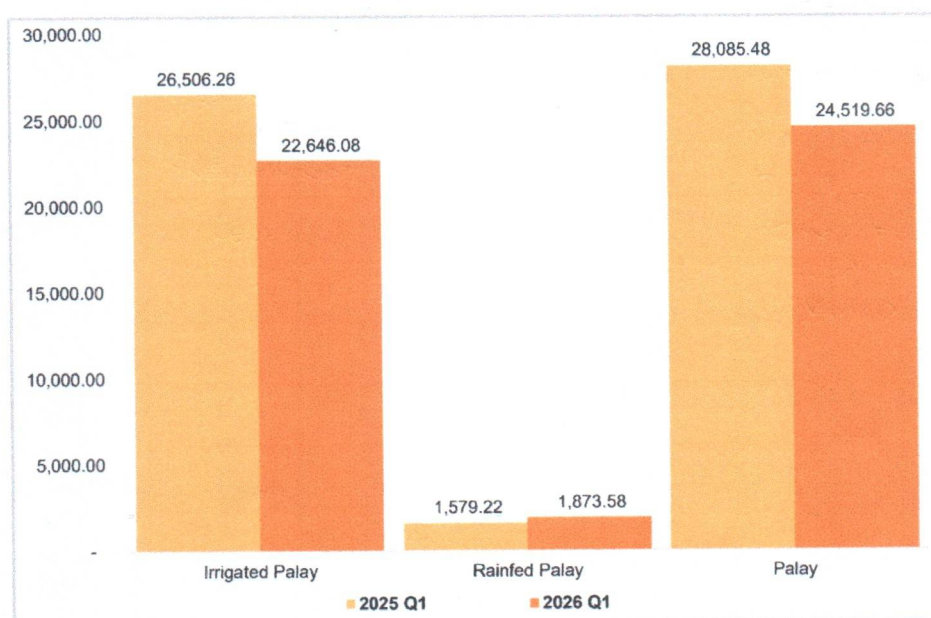

Reference No. LagSR_2026-06-016

The Palay Production Survey (PPS) is conducted quarterly to gather data on palay production, area, and yield, including information on planting/harvested areas, monthly production distribution, farm household usage, standing crop area, input usage, and program participation. The data presented here were validated and obtained from the Philippine Statistics Authority- OpenStat Database.

In the first quarter of 2026, Laguna produced 24,519.66 metric tons of palay, reflecting a 12.7 percent decrease from the 28,085.48 metric tons recorded during the same quarter of 2025.

Among the ecosystem types, irrigated palay contributed the highest share with 22,646.08 metric tons, while rainfed palay recorded 1,873.58 metric tons. Compared with the previous year, irrigated palay production declined by 14.6 percent, whereas rainfed palay production increased by 18.6 percent.

p – preliminary

The total area harvested for palay declined by 9.5 percent, from 5,923.55 hectares in the first quarter of 2025 to 5,362.00 hectares in the same quarter of 2026.

Irrigated palay area harvested decreased from 5,453.65 hectares to 4,855.00 hectares, while rainfed palay area harvested increased from 469.90 hectares to 507.00 hectares.

p - preliminary

Yield per hectare for palay decreased by 3.6 percent, from 4.74 metric tons per hectare in the first quarter of 2025 to 4.57 metric tons per hectare in the same period of 2026.

Irrigated palay yield declined from 4.86 metric tons per hectare to 4.66 metric tons per hectare. Meanwhile, rainfed palay yield improved from 3.36 metric tons per hectare to 3.70 metric tons per hectare.

Technical Notes

The Palay Production Survey (PPS) conducts quarterly assessments to estimate and predict palay production, area, and yield. It covers data on planted/harvested areas, monthly production distribution, farm household usage, standing crop area, input utilization, and program participation.

Reference periods are as follows:

- January (October to December)
 - April (January to March)
 - July (April to June)
 - October (July to September)
-
- a. Production refers to the harvested quantity during the reference period.
 - b. Area Harvested denotes the actual harvested area. Irrigated Farms have artificial water supply.
 - c. Rainfed Farms rely solely on rainfall.
 - d. Yield measures the agricultural production per unit of land area.
